into the hugely significant works produced by the Worcester foundation at a period of turmoil and change From the mid eleventh to the mid twelfth century Worcester was a monastic community of unparalleled importance Not only was it home to many of the most famous bishops and monks of the period including Bishop Wulfstan II it was also a centre of notable and ambitious scholarly production Under Wulfstan's guidance a number of Worcester brethren undertook historical research that resulted in the writing of such renowned texts as Hemming's Cartulary and the Worcester Chronica Chronicarum Significantly these historical endeavours spanned the political chasm of the Norman Conquest The essays collected here aim to shed new light on different aspects of the Worcester historical workshop whose literary output was in several respects pioneering in contemporary European scholarship Several chapters address the different ways in which the monks organised and updated their archives of documents both via their sequence of cartularies with a special focus on the narrative parts of Hemming's Cartulary and via an interesting and previously unedited prose account of the foundation of the see Others focus on the famous Worcester Chronica Chronicarum attributed both to Florence and to John investigating the major model for its composition and structure the work of Marianus Scotus the stages in which it was completed and its connections with Welsh chronicles as well as the related and fascinating abbreviated version written mostly in the hand of John himself and known as the Chronicula The volume thus elucidates how the Worcester monks navigated the period across the Conquest through the composition of different genres of texts and how these texts shaped their own institutional memory Nomina germanica

,1940 *The Many Voices of Modern Physics* Joseph E. Harmon,Alan G. Gross,2023-03-07 The Many Voices of Modern Physics follows a revolution that began in 1905 when Albert Einstein published papers on special relativity and quantum theory Unlike Newtonian physics this new physics often departs wildly from common sense a radical divorce that presents a unique communicative challenge to physicists when writing for other physicists or for the general public and to journalists and popular science writers as well In their two long careers Joseph Harmon and the late Alan Gross have explored how scientists communicate with each other and with the general public Here they focus not on the history of modern physics but

on its communication In their survey of physics communications and related persuasive practices they move from peak to peak of scientific achievement recalling how physicists use the communicative tools available in particular thought experiments analogies visuals and equations to convince others that what they say is not only true but significant that it must be incorporated into the body of scientific and general knowledge Each chapter includes a chorus of voices from the many celebrated physicists who devoted considerable time and ingenuity to communicating their discoveries to the science journalists who made those discoveries accessible to the public and even to philosophers sociologists historians an opera composer and a patent lawyer With their final collaboration Harmon and Gross offer a tribute to the communicative practices of the physicists who convinced their peers and the general public that the universe is a far more bizarre and interesting place than their nineteenth century predecessors imagined
