Calcium Regulation of Cellular Function, 2000-04-01 Volume 30 examines the prominent role of calcium as an intracellular second messenger. Leading investigators review a wide variety of studies on how calcium enters and moves through cells, how it interacts with its many binding proteins, and how calcium and its intracellular receptor calmodulin control vital cellular processes. Coverage includes a detailed analysis of the mechanisms by which calcium bound to calmodulin regulates contractile proteins in smooth muscle cells. Close attention is given to the roles of calcium and calmodulin-dependent protein kinases and phosphatases in synaptic signal transduction, protein synthesis, gene expression, programmed cell death, activation of T lymphocytes, and control of cell division cycles. Other chapters discuss studies using genetically manipulable nonmammalian organisms to further probe the functions of calcium and calmodulin. **UGC NET unit-2 LIFE SCIENCE Cellular Organisation book with 600 question answer as per updated syllabus** DIWAKAR EDUCATION HUB, 2022-08-25 UGC NET LIFE SCIENCE unit 2 *MicroRNA in Regenerative Medicine* Chandan K. Sen, 2023-05-08 Regulating virtually all biological processes, the genome's 2,654 newly discovered variants of mature microRNAs, short ribonucleic acid molecules found in eukaryotic cells, hold a key role in the body's toolkit of regenerative and reparative capacities. Identifying how to activate and deliver these specialist molecules may aid in the repair and regeneration of major tissue and organ damage in future therapies. In *MicroRNA and Regenerative Medicine*, Second Edition, over 50 leading experts address foundational and emerging topics in the field. Concisely summarizing and evaluating key findings from new research and their translational application, contributors examine current and future significance of clinical research in the miRNA area. Coverage encompasses all major aspects of fundamental stem cell and developmental biology, including the uses of miRNA in cell and tissue plasticity, developmental biology, tissue repair, and regeneration. In particular, contributors provide focused coverage of methodologies for regenerative intervention and tissue engineering. Topics new to this edition include proteomic changes during tissue repair and regeneration, horizontal transfer of miRNAs in tissue regeneration, tissue stemness, peripheral nerve regeneration, miRNA as biomarkers, microRNA in pregnancy and embryo development, exogenous and diet-derived microRNA in tissue development, ocular microRNA, mitochondrial microRNA, sensory hair cell death and regeneration, and microRNA in senescence. Features chapter contributions from international leaders in the field, covering the spectrum from bench to bedside. Includes short applied chapters offering focused discussion and practical examples. Incorporates multi-color text layout with more than 150 color figures to illustrate important findings.

Cellular Function and Metabolism Yoshio Yazaki,Seibu Mochizuki,2012-12-06 A variety of metabolic processes are known to be intimately involved in the maintenance of cellular structure and function It has also become clear that metabolic events involved in the synthesis and hydrolysis of ATP as well as for the synthesis of proteins and phospholipids are essential for cellular health The regulation of cell function is generally achieved through participation of a wide variety of hormones and different signal transduction mechanisms for the activation deactivation of some specific metabolic processes In this regard cyclic AMP and calcium seem to play a crucial role Various hormones are also known to affect the genetic machinery of all the cell however the exact signals for genetic control of cellular function are not well defined In particular the sequence of events concerned with remodelling of different types of cells under various pathological situations is poorly understood In this book we have therefore dealt with some of these issues from biochemical molecular biological physiological and pharmacological viewpoints Special emphasis has been laid on understanding heart function and metabolism in health and disease in general and cardiac hypertrophy heart failure and ischemic heart disease in particular It is hoped that this multidisciplinary information will be of value to basic scientists and clinical investigators *Vertebrate Development* Francisco Pelegri,Michael Danilchik,Ann Sutherland,2016-12-13 This book provides a comprehensive overview of topics describing the earliest steps of fertilization from egg activation and fertilization to the activation of the zygotic genome in various studied vertebrate model systems The contribution of maternal and paternal factors and their role in the early embryo as parental DNA becomes modified and embryonic genes become activated is fundamental to the initiation of

embryogenesis in all animal systems It can be argued that this is a unique developmental period when information from the parents is compressed to direct the development of the body plan of the entire organism a process of astounding simplicity elegance and beauty In addition to their fundamental scientific interest many frontiers of biomedicine such as reproductive biology stem cells and reprogramming and the understanding of intergenerational diseases depend on advances in our knowledge of these early processes Vertebrate Development Maternal to Zygotic Control brings together chapters from experts in various disciplines describing the latest advances related to this important developmental transition Each chapter is a synthesis of knowledge relevant to all vertebrates with details on specific systems as well as comparisons between the various studied vertebrate models The editorial expertise encompasses the fields of major vertebrate model systems mammalian amphibian and teleost ensuring a balanced approach to various topics This unique book with its combination of in depth and up to date basic research inter species comprehensiveness and emphasis on the very early stages of animal development is essential for research scientists studying vertebrate development as well as being a valuable resource for college educators teaching advanced courses in developmental biology
