Second Edition** Greg Matloff, C. Bangs, 2020-05-07 The only thing we can be absolutely sure of is our own consciousness But what is consciousness Is it a property that is unique to humans or do we share it with other lifeforms Or is

the philosophical doctrine of panpsychism correct are stars and the entire universe conscious in some sense Early chapters in this book examine the prehistory mythology and history of this topic Arguments are presented from the viewpoints of shamans philosophers poets quantum physicists and novelists A simple toy model of panpsychism is then presented in which a universal field of proto consciousness interacts with molecular bonds via the vacuum fluctuation pressure of the Casimir Effect It is shown how this model is in congruence with an anomaly in stellar motions called Parenago's Discontinuity Cooler less massive stars such as the Sun apparently circle the center of the galaxy faster than their hotter bluer more massive sisters This discontinuity occurs at the point in the stellar distribution where molecules begin to appear in stellar spectra As described in the first edition of this book observations of main sequence stars out to 260 light years and giant stars out to 1 000 light years using the ESA Hipparcos space observatory support the reality and non locality of Parenago's Discontinuity Local more conventional explanations for this phenomenon are not supported by observations of other galaxies and the spiral arms of the Milky Way Since 2014 the new ESA Gaia space observatory has been obtaining kinematics and position data for 1 billion stars in our galaxy The first Gaia data release in 2016 has been used in 2018 by a Russian team to demonstrate Parenago's Discontinuity for a large stellar sample out to 500 light years from the Sun These observations support the hypothesis that anomalistic stellar motion is due to stellar volition as described by philosopher author Olaf Stapledon in his classic novel Star Maker as previously discussed by the author in the peer reviewed Journal of the British Interplanetary Society JBIS In light of the new Gaia observations and work by other researchers it is not impossible that panpsychism is emerging from the realm of philosophy as a new subdivision of observational astronomy Simple models of universal proto consciousness may be subject to inductive tests using current and future space observatories A special feature of this book is the chapter frontispiece art by C Bangs

Big History and the Future of Humanity Fred Spier, 2015-03-04 big history and the future of humanity This remains the best single attempt to theorize big history as a discipline that can link core concepts and paradigms across all historical disciplines from cosmology to geology from biology to human history With additional and updated material the Second Edition also offers a fine introduction to the history of big history and a superb introductory survey to the big history story Essential reading for anyone interested in a rapidly evolving new field of scholarship that links the sciences and the humanities into a modern science based origin story David Christian Macquarie University Notable for its theoretic approach this new Second Edition is both an indispensable contribution to the emerging big history narrative and a powerful university textbook Spier defines words carefully and recognizes the limits of current knowledge aspects of his own clear thinking Cynthia Brown Emerita Dominican University of California Reflecting the latest theories in the sciences and humanities this new edition of Big History and the Future of Humanity presents an accessible and original overview of the entire sweep of history from the origins of the universe and life on Earth up to the present day Placing the relatively brief period of human history within a much broader framework one that considers

everything from vast galaxy clusters to the tiniest sub atomic particles big history is an innovative theoretical approach that opens up entirely new multidisciplinary research agendas Noted historian Fred Spier reveals how a thorough examination of patterns of complexity can offer richer insights into what the future may have in store for humanity The second edition includes new learning features such as highlighted scientific concepts an illustrative timeline and comprehensive glossary By exploring the cumulative history from the Big Bang to the modern day Big History and the Future of Humanity Second Edition sheds important historical light on where we have been and offers a tantalizing glimpse of what lies ahead

Rethinking History, Science, and Religion Bernard Lightman,2019-10-03 The historical interface between science and religion was depicted as an unbridgeable conflict in the last quarter of the nineteenth century Starting in the 1970s such a conception was too simplistic and not at all accurate when considering the totality of that relationship This volume evaluates the utility of the complexity principle in past present and future scholarship First put forward by historian John Brooke over twenty five years ago the complexity principle rejects the idea of a single thesis of conflict or harmony or integration or separation between science and religion Rethinking History Science and Religion brings together an interdisciplinary group of scholars at the forefront of their fields to consider whether new approaches to the study of science and culture such as recent developments in research on science and the history of publishing the global history of science the geographical examination of space and place and science and media have cast doubt on the complexity thesis or if it remains a serviceable historiographical model

The Solar System David G. Fisher,Richard R. Erickson,2010 Covers 180 features of Earth s solar system including every major body and phenomenon

offering detailed basic information on all major aspects Evolution and the Emergent Self Raymond L. Neubauer, 2012 This book examines how humans evolved from the cosmos and prebiotic earth and what types of biological chemical and physical sciences drove this complex process The author presents his view of nature which attributes the rising complexity of life to the continual increasing of information content first in genes and then in brains **How to Find a Habitable Planet** James F. Kasting, 2021-12-07 The amazing science behind the search for Earth like planets Ever since Carl Sagan first predicted that extraterrestrial civilizations must number in the millions the search for life on other planets has gripped our imagination Is Earth so rare that advanced life forms like us or even the simplest biological organisms are unique to the universe How to Find a Habitable Planet describes how scientists are testing Sagan's prediction and demonstrates why Earth may not be so rare after all James Kasting has worked closely with NASA in its mission to detect habitable worlds outside our solar system and in this book he introduces readers to the advanced methodologies being used in this extraordinary quest He addresses the compelling questions that planetary scientists grapple with today What exactly makes a planet habitable What are the signatures of life astronomers should look for when they scan the heavens for habitable worlds In providing answers Kasting explains why Earth has remained habitable despite a substantial rise in solar luminosity over time and why our neighbors Venus and Mars haven't If other Earth sized planets endowed with enough water and carbon are out there he argues chances are good that some of those planets sustain life Kasting describes the efforts under way to find them and predicts that future discoveries will profoundly alter our view of the universe and our place in it This book is a must read for anyone who has ever dreamed of finding other planets like ours and perhaps even life like ours in the cosmos In a new afterword Kasting presents some recent breakthroughs in the search for exoplanets and discusses the challenges facing space programs in the near future **Observational Astrophysics** Robert C. Smith, 1995-06-30 Combining a critical account of observational methods telescopes and instrumentation with a lucid description of the Universe including stars galaxies and cosmology Smith provides a comprehensive introduction to the whole of modern astrophysics beyond the solar system The first half describes the techniques used by astronomers to observe the Universe optical telescopes and instruments are discussed in detail but observations at all wavelengths are covered from radio to gamma rays After a short interlude describing the appearance of the sky at all wavelengths the role of positional astronomy is highlighted In the second half a clear description is given of the contents of the Universe including accounts of stellar evolution and cosmological models Fully illustrated throughout with exercises given in each chapter this textbook provides a thorough introduction to astrophysics for all physics undergraduates and a valuable background for physics graduates turning to research in astronomy *Astrophysical Techniques, Sixth Edition* C.R. Kitchin, 2013-11-18 Long used in undergraduate and introductory graduate courses Astrophysical Techniques Sixth Edition provides a comprehensive account of the instruments detectors and techniques employed in astronomy and astrophysics Emphasizing the underlying unity of all astronomical observations this popular text provides a coherent state of

the art account of the instruments and techniques used in current astronomy and astrophysics As in earlier editions the author aims to reduce the trend towards fragmentation of astronomical studies The underlying unity of all of astronomical observation is emphasized by the layout of the book the pattern of detection imaging ancillary techniques has been adopted so that one stage of an observation is encountered together with the similar stages required for all other information carriers The book is written in a very accessible manner and most of the mathematics is accessible to those who have attended a mathematics course in their final years at school Nevertheless the treatment of the topics in general is at a sufficiently high level to be of use to those professionals seeking technical information in areas of astronomy with which they might not be completely familiar

Computer Simulation Validation Claus Beisbart, Nicole J. Harvesting Space for a Greener Earth Greg Matloff, C Bangs, Les Johnson, 2014-04-07 What was our

planet like in years past How has our civilization affected Earth and its ecology Harvesting Space for a Greener Planet the Second Edition of Paradise Regained The Regreening of the Earth begins by discussing these questions and then generates a scenario for the restoration of Earth It introduces new and innovative ideas on how we could use the Solar System and its resources for terrestrial benefit The environmental challenges that face us today cannot be resolved by conservation and current technologies alone Harvesting Space highlights the risk of humankind s future extinction from environmental degradation Population growth global climate change and maintaining sustainability of habitats for wildlife are all considered among other issues Rather than losing heart we need to realize that the solutions to these problems lie in being good stewards of the planet and in the development of space Not only will the solutions offered here avert a crisis they will also provide the basis for continued technological and societal progress Tapping the resources of near Earth asteroids will lead to methods of diverting those asteroids that threaten Earth Space based terrestrial power generation systems will work synergistically with Earth based conservation This book needs to be read urgently and widely if we are to save ourselves from environmental disaster reduce the risk of catastrophic cosmic impacts and build a prosperous and sustainable future for all the creatures of Earth
