**The Universe in a Box** Andrew Pontzen, 2023-06-13 Scientists are using simulations to recreate the universe revealing the hidden nature of reality Cosmology is a tricky science no one can make their own stars planets or galaxies to test its theories But over the last few decades a new kind of physics has emerged to fill the gap between theory and experimentation Harnessing the power of modern supercomputers cosmologists have built simulations that offer profound insights into the deep history of our universe allowing centuries old ideas to be tested for the first time Today physicists are translating their ideas and equations into code finding that there is just as much to be learned from computers as experiments in laboratories In The Universe in a Box cosmologist Andrew Pontzen explains how physicists model the universe s most exotic phenomena from black holes and colliding galaxies to dark matter and quantum entanglement enabling them to study the evolution of virtual worlds and to shed new light on our reality But simulations don t just allow experimentation

with the cosmos they are also essential to myriad disciplines like weather forecasting epidemiology neuroscience financial planning airplane design and special effects for summer blockbusters Crafting these simulations involves tough compromises and expert knowledge Simulation is itself a whole new branch of science one that we are only just beginning to appreciate and understand The story of simulations is the thrilling history of how we arrived at our current knowledge of the world around us and it provides a sneak peek at what we may discover next     *Resources in Education* ,2000     **Mercury** ,1990
