

## Bond Energy

What makes a reaction endothermic or exothermic?

### Why?

Chemical reactions can be a lot like playing with Legos®—you must take apart part of your last creation before you can replace it with something new. For many chemical reactions, we have to first break bonds in the reactants before we can put the atoms back into a new arrangement to form the products. Both of these processes involve changes in energy. The net energy change for a reaction is called the **heat of reaction** or the **change in enthalpy** ( $\Delta H$ ). In this activity we will look at one way energy changes can be approximated for chemical reactions.

### Model 1 – Breaking and Forming Bonds

	Reaction	Change in Energy (kJ/mol <sub>rxn</sub> )		Reaction	Change in Energy (kJ/mol <sub>rxn</sub> )
A)	$\text{PCl}_5(\text{g}) \rightarrow \text{P}(\text{g}) + 3\text{Cl}(\text{g})$	+ 966.7 <i>broken</i>	E)	$\text{P}(\text{g}) + 3\text{Cl}(\text{g}) \rightarrow \text{PCl}_5(\text{g})$	- 966.7 <i>formed</i>
B)	$\text{PCl}_5(\text{g}) \rightarrow \text{P}(\text{g}) + 5\text{Cl}(\text{g})$	+ 1,297.9 <i>broken</i>	F)	$\text{P}(\text{g}) + 5\text{Cl}(\text{g}) \rightarrow \text{PCl}_5(\text{g})$	- 1,297.9 <i>formed</i>
C)	$\text{PF}_5(\text{g}) \rightarrow \text{P}(\text{g}) + 3\text{F}(\text{g})$	+ 1,470.4 <i>broken</i>	G)	$\text{P}(\text{g}) + 3\text{F}(\text{g}) \rightarrow \text{PF}_5(\text{g})$	- 1,470.4 <i>formed</i>
D)	$\text{PF}_5(\text{g}) \rightarrow \text{P}(\text{g}) + 5\text{F}(\text{g})$	+ 2,305.4 <i>broken</i>	H)	$\text{P}(\text{g}) + 5\text{F}(\text{g}) \rightarrow \text{PF}_5(\text{g})$	- 2,305.4 <i>formed</i>

- Identify four reactions in Model 1 where bonds are being broken. Write "broken" in the Change in Energy box in the table for each reaction you identify.
- Identify four reactions in Model 1 where bonds are being formed. Write "formed" in the Change in Energy box in the table for each reaction you identify.
- Circle the correct word to complete each sentence below.
  - When bonds are broken (~~formed~~) there is a positive energy change.
  - Breaking bonds is endothermic (~~exothermic~~).
  - When bonds are broken (~~formed~~) there is a negative energy change.
  - Forming bonds is exothermic (~~endothermic~~).
- Find two reactions in Model 1 that are exact opposites of each other, that is, one reaction is the reverse of the other reaction.
  - How do the changes in energy for the reverse reactions compare?  
*same absolute value, opposite sign*
  - Explain your answer to part a considering what you learned from Questions 1–3 about bond breaking and bond formation.

*amt of energy required to break is same as amount released when formed*

**Molecular Radiation Biology** Hermann Dertinger, Horst Jung, 2013-11-09 There can hardly be any doubt that radiation will continue to be an important factor in our lives Present and future advances in atomic technology urgently require further work on research and development in the field of radiation biology if the maximum benefit is to be obtained at minimal risk from the various kinds of radiation that form a major by product of nuclear processes Consequently it is also necessary to prepare students and younger scientists for doing such work The present book originates from teaching experience gained in lectures seminars and discussion groups started by the undersigned in 1957 and more recently held together with Drs Dertinger and Jung The friendly comments given to the German edition made us feel that it might be worthwhile to put the results of our efforts at the disposal of those to whom English is more familiar In agreement with the view based on well known facts that most if not all of the more striking practical achievements have resulted from patient and careful investigations into some basic problem the book aims at introducing the reader to the methods of thought and

experiment used in molecular radiation biology as well as to the results obtained thereby      Research in Progress ,1964

Chemical Interactions ,2005      *Biological Physics* Philip Nelson,2013-12-16 Biological Physics focuses on new results in molecular motors self assembly and single molecule manipulation that have revolutionized the field in recent years and integrates these topics with classical results The text also provides foundational material for the emerging field of nanotechnology      High Pressure Geochemistry & Mineral Physics S. Mitra,2004-12-11 Significant achievements have been made at the cross roads of physics and planetary science In the second half of the twentieth century the discipline of planetary sciences has witnessed three major episodes which have revolutionized its approach and content i the plate tectonic theory ii human landing and discoveries in planetary astronomy and iii the extraordinary technical advancement in high P T studies which have been abetted by a vast improvement in computational methods Using these new computational methods such as first principles including ab initio models calculations have been made for the electronic structure bonding thermal EOS elasticity melting thermal conductivity and diffusivity In this monograph the boundaries of the definitions of a petrologist geochemist geophysicist or a mineralogist have been willfully eliminated to bring them all under the spectrum of high pressure geochemistry when they deal with any material quintessentially a chemical assemblage terrestrial or extraterrestrial under the conditions of high pressure and temperature Thus a petrologist using a spectrometer or any instrument for high pressure studies of a rock or a mineral or a geochemist using them for chemical synthesis and characterization is better categorized as a high pressure geochemist rather than any other kind of disciplinarian The contents of this monograph bring together under one cover apparently disparate disciplines like solid earth geophysics and geochemistry as well as material science and condensed matter physics to present a thorough overview of high pressure geochemistry Indeed such interdisciplinary activities led to the discovery of new phenomena such as high P T behaviour in metal oxides e g Mott transition novel transitions such as amorphization changes in order disorder in crystals and the anomalous properties of oxide melts      *Introduction to Nanoscience and Nanotechnology* Gabor L. Hornyak,H.F. Tibbals,Joydeep Dutta,John J. Moore,2008-12-22 The maturation of nanotechnology has revealed it to be a unique and distinct discipline rather than a specialization within a larger field Its textbook cannot afford to be a chemistry physics or engineering text focused on nano It must be an integrated multidisciplinary and specifically nano textbook The archetype of the modern nano textbook      **Title List of Documents Made Publicly Available** ,1986      **Gas Lasers** E. W. McDaniel,William L. Nighan,2013-10-22 Applied Atomic Collision Physics Volume 3 Gas Lasers describes the applications of atomic collision physics in the development of many types of gas lasers Topics covered range from negative ion formation in gas lasers to high pressure ion kinetics and relaxation of molecules exchanging vibrational energy Ion ion recombination in high pressure plasmas is also discussed along with electron ion recombination in gas lasers and collision processes in chemical lasers Comprised of 14 chapters this volume begins with a historical summary of gas laser developments and an overview of the

basic operating principles of major gas laser types The discussion then turns to the mechanism of formation of negative ions in gas lasers ion ion recombination in high pressure plasmas electron ion recombination in gas lasers and collision processes in chemical lasers Subsequent chapters focus on high energy carbon dioxide laser amplifiers spectroscopy and excited state chemistry of excimer lasers rare gas halide lasers transient optical absorption in the ultraviolet and pre ionized self sustained laser discharges The final chapter considers the stability of excimer laser discharges This book will be of interest to
