Enzyme Handbook 7 Dietmar Schomburg, Margit Salzmann, Dörte Stephan, 2012-12-06 Recent progress on enzyme immobilisation enzyme production coenzyme regeneration and enzyme engineering has opened up fascinating new fields for the potential application of enzymes in a large range of different areas As more progress in research and application of enzymes has been made the lack of an up to date overview of enzyme molecular properties has become more apparent Therefore we started the development of an enzyme data in formation system as part of protein design activities at GBF The present book *Enzyme Handbook* represents the printed version of this data bank In future a computer searchable version will be also available The enzymes in this Handbook are arranged according to the Enzyme Commission list of enzymes Some 3000 different enzymes will be covered Frequently enzymes with very different properties are included under the same EC number Although we intend to give a representative overview on the characteristics and variability of each enzyme the Handbook is not a compendium The reader will have to go to the primary literature for more detailed information Naturally it is not possible to cover all the numerous literature references for each enzyme for special enzymes up to 40000 if the data re presentation is to be concise as is intended *Handbook of Biologically Active Peptides* Abba Kastin, 2013-01-26

Handbook of Biologically Active Peptides Second Edition is the definitive indispensable reference for peptide researchers biochemists cell and molecular biologists neuroscientists pharmacologists and endocrinologists Its chapters are designed to be a source for workers in the field and enable researchers working in a specific area to examine related areas outside their expertise Peptides play a crucial role in many physiological processes including actions as neurotransmitters hormones and antibiotics Research has shown their importance in such fields as neuroscience immunology pharmacology and cell biology The second edition of *Handbook of Biologically Active Peptides* presents this tremendous body of knowledge in the field of biologically active peptides in one single reference The section editors and contributors represent some of the most sophisticated and distinguished scientists working in basic sciences and clinical medicine Presents all aspects of biologically active peptides in one resource Features more than 20 sections spanning plant bacterial fungal venom and invertebrate peptides to general peptides Includes immunological inflammatory cancer vaccine and neurotrophic peptides Discusses peptide precursors mRNA distribution processing and receptors not just pathophysiological implications **Clearinghouse**
