Activity Based Costing Solutions:

Activity-Based Cost Management Gary Cokins, 2002-04-08 Bedingt durch das Internetzeitalter verlagert sich die Marktmacht mehr und mehr Richtung Verbraucher. Dadurch werden Unternehmen gezwungen ihre Preise niedrig zu halten wenn sie weiterhin wettbewerbsfähig bleiben und ihre Gewinne steigern wollen. Die Zauberformel für die Verwirklichung dieses Ziels heisst Activity Based Costing and Management (ABC/M) das sich aus Prozesskostenrechnung und Prozesskosten Management zusammensetzt. Es liefert die Daten mit deren Hilfe die beiden kritischen Managementstrategien niedrige Preise und höhere Gewinne erfolgreich umgesetzt werden können. Aber ABC/M liefert nicht nur ein genaueres Bild der Unternehmenskosten sondern gleichzeitig wichtige Informationen um bessere Entscheidungen zu treffen, höhere Gewinne zu erzielen und ein effektiveres Kostenmanagement zu betreiben. Activity Based Cost Management ist ein praktischer Leitfaden der speziell für Führungskräfte konzipiert wurde und anschaulich erklärt wie ein ABC/M Modell funktioniert und wie man es schnell und problemlos in die Praxis umsetzt. Autor Gary Cokins ein führender internationaler Experte auf diesem Gebiet gibt Ihnen hier die Mittel an die Hand ein effizientes ABC/M Modell zu entwickeln und erfolgreich in Ihrem Unternehmen einzusetzen. Verständlich und unterhaltsam geschrieben. Ein maßgeblicher und unverzichtbarer Leitfaden zu einem

Kaplan, Steven R. Anderson, 2007-02-22 In the classroom ABC looks like a great way to manage a company's resources. But many executives who have tried to implement ABC on a large scale in their organizations have found the approach limiting and frustrating. Why? The employee surveys that companies used to estimate resources required for business activities proved too time consuming expensive and irritating to

employees This book shows you how to implement time driven activity based costing TDABC an easier and more powerful way to implement ABC You can now estimate directly the resource demands imposed by each business transaction product or customer The payoff You spend less time and money obtaining and maintaining TDABC data and more time addressing problems that TDABC reveals such as inefficient processes unprofitable products and customers and excess capacity The authors also show how to use TDABC to link strategic planning to operational budgeting to enhance the due diligence process for mergers and acquisitions and to support continuous improvement activities such as lean management and benchmarking In presenting their model the authors define the two questions required to build TDABC 1 How much does it cost per time unit to supply resource capacity for each business process 2 How much resource capacity time is required to perform work for a company s many transactions products and customers The book demonstrates how to develop simple valid answers to these two questions Kaplan and Anderson illustrate the TDABC approach with a wealth of case studies in diverse settings based on actual implementations

Construction Logistics Solutions in Urban Areas Mats Janné, 2018-05-15 More and more people are living in or moving to urban areas than ever before This attraction to urban areas means that new houses and work places are needed Building new houses or renovating older housing stock is a natural way for a city to evolve However the end products of construction projects are produced at their place of consumption This means that a multitude of materials and resources need to be delivered to and removed from each construction site This leads to new transport flows being created in urban areas In urban areas these transports are subjected to space limitations

environmental demands accessibility demands and noise restrictions This has led to a situation where material deliveries to construction sites needs to be coordinated and managed in ways that reduce their impact on the urban transport system and at the same time ensuring efficient construction projects In essence construction in urban areas faces two problems the urban transport problem and the problem of coordinating multiple construction stakeholders One way to address these problems is through the use of construction logistics solutions such as terminals e g construction logistics centres and checkpoints The aim of both types of solutions is to control and coordinate construction transports In the construction industry these solutions are however still a rather new phenomenon This means that how these solutions are perceived by different stakeholders and the effect the solutions have on material flows and costs needs to be explored further The purpose of this thesis is to explore how construction logistics solutions can be used as a means to coordinate material flows to ensure efficient construction and reduce disturbances on the urban transport system To achieve this purpose the following research questions have been addressed RQ1 How are different stakeholders in the construction industry affected by construction logistics solutions RQ2 How will the use of construction logistics solutions affect material flows and costs in urban construction projects To answer the research questions two main methodologies have been used case study research for the empirical studies and literature reviews for the analysis of the case studies as well as for understanding how supply chain management logistics and third party logistics affects the inter organizational relationships of the construction industry The main findings of the research are firstly that construction logistics solutions do have a role to play in the coordination of different construction stakeholders Adding this new node will force construction stakeholders to address coordination issues in order to ensure that material deliveries arrive to construction sites on time This also implies that new inter organizational relationships will evolve where communication is key However this may not be an easy task as it will call for an attitude adjustment towards a more open and collaborative environment Secondly adding a construction logistics solution can reduce some unnecessary friction between construction stakeholders and third parties Coordinated material flows can lead to a reduction in the amount of material delivery vehicles that travels to site thus alleviating some of the congestion in the urban transport system This will not reduce all friction between construction projects and third parties but it is a step in the right direction Thirdly a construction logistics solution must come with a set of regulations and a governance strategy from the initiator of the solution This governance strategy must be clearly stated and communicated to the affected stakeholders To alleviate animosity towards the solution flexibility and stakeholder involvement is key If the directly affected stakeholders are consulted on the function chances are that they will be more accepting of the solution
