

# USE OF GLUCOSE-LOWERING MEDICATIONS IN THE MANAGEMENT OF TYPE 2 DIABETES

## HEALTHY LIFESTYLE BEHAVIORS; DIABETES SELF-MANAGEMENT EDUCATION AND SUPPORT (DSMES); SOCIAL DETERMINANTS OF HEALTH (SDOH)

\* In people with HF, CVD, established CVD or multiple risk factors for CVD, the decision to use a SLP-1 RA or SGLT3 with proven benefit should be independent of background use of metformin. A strong recommendation is warranted for people with CVD and a weaker recommendation for those with indicators of high CV risk. However, a higher absolute risk reduction and thus lower numbers needed to treat may occur at higher levels of baseline risk and should be factored into the shared decision-making process. (See text for details). † Low-dose TZD may be better tolerated and similarly effective. ‡ For SGLT3, CV benefit outcomes trials demonstrate their efficacy in reducing the risk of composite MACE, CV death, all-cause mortality, HF, stroke, and renal outcomes in individuals with T2D with established high risk of CVD. †† For SLP-1 RA, CV benefit outcomes trials demonstrate their efficacy in reducing composite MACE, CV death, all-cause mortality, HF, stroke, and renal outcomes in individuals with T2D with established high risk of CVD.
