**A Review of the Draft 2013 National Climate Assessment** National Research Council, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and Society, Division on Earth and Life Studies, Board on Atmospheric Studies and Climate, Panel to Review the National Climate Assessment, 2013-04-11 As mandated by the Global Change Research Act GCRA the U S Global Change Research Program is currently producing a National Climate Assessment NCA The NCA is a report to inform the President the Congress and the American people about the current state of scientific knowledge regarding climate change effects on U S regions and key sectors now and in the coming decades This document contains an evaluation of the draft NCA report presented through consensus responses to the Panel s Task Statement questions and through a large collection of individual Panel member comments and suggestions for specific chapters statements figures etc While focusing primarily on practical suggestions for immediately improving the current draft the Panel also raises some broader considerations about fundamental approaches used in certain parts of the NCA report and about the scope of USGCRP research that underlies the NCA findings Some suggestions can be viewed as longer term advice for future versions of NCA work This NCA has been a significantly more ambitious effort than previous assessments in terms of the scope of topics addressed and the breadth of public engagement processes involved Some of the important new areas include the use of traceable accounts the articulation of needs for future research and a vision for an ongoing assessment process the outreach efforts to help various stakeholders define their climate related information needs and the initial though incomplete effort to assess the current state of climate change response activities around the nation Given the current state of the science and the scope of resources available we believe the NCA did a reasonable job of fulfilling its charge overall Although more needs to be done to fully meet the nation s needs for information and guidance such needs cannot be met without an expanded research effort on the part of the USGCRP and future assessments The Panel suggests that the NCA report would be improved by addressing the numerous specific problems and concerns and the more cross cutting issues raised in the consensus answers to the Task Statement questions which include for instance the need to 1 provide a clear overarching framework for the report that helps readers understand climate change as part of a complex system with interacting physical biological and human social economic dimensions and offers practical guidance on using iterative risk management strategies to make decisions in the face of large uncertainties 2 clearly acknowledge how climate change affects and is affected by other types of major global environmental changes and other societal developments 3 offer an explicit discussion about the uncertainties associated with the regional model projections presented in the NCA draft 4 take full advantage of the e book format planned for this document through strategic use of hyperlinks among different parts of the report and other innovative approaches that help guide the experience of the NCA s diverse audiences As the nation continues to engage with the threats opportunities and surprises of climate change in its many manifestations the 2013 NCA

should prove to be a valuable resource as a summary of the state of knowledge about climate change and its implications for the American people

**Interpretation and Implications of Variability in Ecological Systems** Robert Klinger, Clare Aslan , Karen Thorne, 2024-07-22 Numerous hypotheses have been proposed to explain the dynamics in abundance of individual species how species interact how communities assemble and how interactions between biotic and abiotic processes shape ecosystem stability Many if not most of these hypotheses find some degree of support but often only within relatively narrow spatial and temporal ranges This is because conditions vary over time and from place to place and so the strength and extent of processes that were the focus of a given a hypothesis become altered by other forces Ecologists have confronted variability from two perspectives conceptual and statistical Conceptually spatial and temporal variability are now recognized as being scale dependent and hierarchical Statistically there are many models that ecologists readily use that account for the hierarchical and scale dependence of variability present in many datasets But linking the two perspectives into a meaningful understanding of what variability means in real

systems has been much less successful For example it is common to see studies where the fixed effects of a generalized linear mixed model are reported but very often random effects are completely ignored or at best given scant attention The likelihood of this being a significant problem increases greatly in what are rapidly becoming more common studies that utilize datasets spanning long temporal and or large spatial scales or when extreme and often unpredictable events gray and black swans occur
