

Introduction to Categorical Data Analysis

MAS-403

Prepared by Carla M. Clemente

Definitions

- A **categorical variable** is a variable that can only take finite or countably many values (categories).
- The **response variable** is sometimes called the dependent variable or Y variable, and the **explanatory variable** is sometimes called the independent variable or X variable.

Categorical/Discrete Data

Measures on categorical or discrete variables consist of assigning observations to one of a number of categories in terms of counts or proportions.

Discretely measured responses can be nominal (unordered), ordinal (ordered), or discrete interval variables with only a few values.

Probability Distributions for Categorical Data

- Statistical inference requires assumptions about the probability distribution that generated the data.
- For a t-test, we assume that a random variable follows a normal distribution.
- For discrete data, we have Bernoulli, Binomial, Poisson, and Multinomial distributions.
