Albert, Nancy Albert-Goldberg, 2005 A3 HIS ALGEBRA is the true story of a struggling young boy from Chicago s west side who grew to become a force in American mathematics For nearly 50 years A A Albert thrived at the University of Chicago one of the world s top centers for algebra His pure research in algebra found its way into modern computers rocket guidance systems cryptology and quantum mechanics the basic theory behind atomic energy calculations This first hand account of the life of a world renowned American mathematician is written by Albert s daughter Her memoir which favors a general audience offers a personal and revealing look at the multidimensional life of an academic who had a lasting impact on his profession SOME QUOTATIONS FROM PROFESSOR ALBERT There are really few bad students of mathematics There are instead many bad teachers and bad curricula The difficulty of learning mathematics is increased by the fact that in so many high schools this very difficult subject is considered to be teachable by those whose major subject is language botany or even physical education It is still true that in a majority of American universities the way to find the Department of Mathematics is to ask for the location of the oldest and most decrepit building on campus The production of a single scientist of first magnitude will have a greater impact on our civilization than the production of fifty mediocre Ph D s Freedom is having the time to do research Even in mathematics there are fashions This doesn t mean that the researcher is controlled by them Many go their own way ignoring the fashionable That s part of the strength of a great university *Logic, Language and Reasoning* Hans Jürgen Ohlbach, U. Reyle, 2012-12-06 th This volume is dedicated to Dov Gabbay who celebrated his 50 birthday in October 1995 Dov is one of the most outstanding and most productive researchers we have ever met He has exerted a profound influence in major fields of logic linguistics and computer science His contributions in the areas of logic language and reasoning are so numerous that a comprehensive survey would already fill half of this book Instead of summarizing his work we decided to let him speak for himself Sitting in a car on the way to Amsterdam airport he gave an interview to Jelle Gerbrandy and Anne Marie Mineur This recorded conversation with him which is included gives a deep insight into his motivations and into his view of the world the Almighty and of course the role of logic In addition this volume contains a partially annotated bibliography of his main papers and books The length of the bibliography and the broadness of the topics covered there speaks for itself **A Century of Mathematics in America** Peter L. Duren, Richard Askey, Uta C. Merzbach, Harold M. of the basics of projective geometry the text examines finite planes field planes and coordinates in an arbitrary plane Additional topics include central collineations and the little Desargues property the fundamental theorem and examples of finite non Desarguesian planes Virtually no knowledge or sophistication on the part of the student is assumed and every algebraic system that arises is defined and discussed as necessary Many exercises appear throughout the book offering significant tools for understanding the subject as well as developing the mathematical methods needed for its study References and a helpful appendix on the Bruck Ryser theorem conclude the text **Experiencing Geometry** David Wilson Henderson,2001 For undergraduate level courses in Geometry Henderson invites students to explore the basic ideas of geometry beyond the formulation of proofs The text conveys a distinctive approach stimulating students to develop a broader deeper understanding of mathematics through active participation including discovery discussion and writing about fundamental ideas It provides a series of interesting challenging problems then encourages students to gather their reasonings and understandings of each problem and discuss their findings in an open forum Catalog of Copyright Entries.
