

The background of the cover is a dark blue gradient, overlaid with several broad, diagonal streaks of light. These streaks are primarily in shades of blue and cyan, with some areas of magenta and pink, creating a sense of motion and depth. The light streaks appear to be composed of many fine, parallel lines, giving them a textured, ethereal quality.

Back-of-the-envelope Quantum Mechanics Maxim Olshanii, 2014 Dimensional and order of magnitude estimates are practiced by almost everybody but taught almost nowhere When physics students engage in their first theoretical research project they soon learn that exactly solvable problems belong only to textbooks that numerical models are long and resource consuming and that something else is needed to quickly gain insight into the system they are going to study Qualitative methods are this something else but typically students have never heard of them before The aim of this book is to teach the craft of qualitative analysis using a set of problems some with solutions and some without in advanced undergraduate and beginning graduate Quantum Mechanics Examples include a dimensional analysis solution for the spectrum of a quartic oscillator simple WKB formulas for the matrix elements of a coordinate in a gravitational well and a three line long estimate for the ionization energy of atoms uniformly valid across the whole periodic table The piece de resistance in the collection is a series of dimensional analysis questions in Integrable Nonlinear Partial Differential Equations with no dimensions existing a priori Solved problems include the relationship between the size and the speed of solitons of the Korteweg de Vries equation and an

Techniques of Asymptotic Analysis Lawrence Sirovich, 2013-12-01 These notes originate from a one semester course which forms part of the Math Methods cycle at Brown In the hope that these notes might prove useful for reference purposes several additional sections have been included and also a table of contents and index Although asymptotic analysis is now enjoying a period of great vitality these notes do not reflect a research oriented course The course is aimed toward people in applied mathematics physics engineering etc who have a need for asymptotic analysis in their work The choice of subjects has been largely dictated by the likelihood of application Also abstraction and generality have not been pursued Technique and computation are given equal prominence with theory Both rigorous and formal theory is presented very often in tandem In practice the means for a rigorous analysis are not always available For this reason a goal has been the cultivation of mature formal reasoning Therefore during the course of lectures formal presentations gradually eclipse rigorous presentations When this occurs rigorous proofs are given as exercises or in the case of lengthy proofs reference is made to the Reading List at the end

Radio Propagation and Remote Sensing of the Environment N.A. Armand, V.M. Global Theory of a Second Order Linear Ordinary Differential Equation with a Polynomial Coefficient, 1975-01-01 Global Theory of a Second Order Linear Ordinary Differential Equation with a Polynomial Coefficient

Advanced Mathematical Methods for Scientists and Engineers I Carl M. Bender, Steven A. Orszag, 2013-03-09 The triumphant vindication of bold theories are these not the pride and justification of our life's work Sherlock Holmes The Valley of Fear Sir Arthur Conan Doyle The main purpose of our book is to present and explain mathematical methods for obtaining approximate analytical solutions to differential and difference equations that cannot be solved exactly Our objective is to help young and also established scientists and engineers to build the skills necessary to analyze equations that they encounter in their work Our presentation is aimed at developing the insights and techniques that are most useful for attacking new problems We do not emphasize special methods and tricks which work only for the classical transcendental functions we do not dwell on equations whose exact solutions are known The mathematical methods

discussed in this book are known collectively as asymptotic and perturbative analysis. These are the most useful and powerful methods for finding approximate solutions to equations but they are difficult to justify rigorously. Thus we concentrate on the most fruitful aspect of applied analysis namely obtaining the answer. We stress care but not rigor. To explain our approach we compare our goals with those of a freshman calculus course. A beginning calculus course is considered successful if the students have learned how to solve problems using calculus.

Modern Electromagnetic Scattering Theory with Applications Andrey V. Osipov, Sergei A. Tretyakov, 2017-01-20. This self contained book gives fundamental knowledge about scattering and diffraction of electromagnetic waves and fills the gap between general electromagnetic theory courses and collections of engineering formulas. The book is a tutorial for advanced students learning the mathematics and physics of electromagnetic scattering and curious to know how engineering concepts and techniques relate to the foundations of electromagnetics.

Probabilistic Methods In Fluids, Proceedings Of The Swansea 2002 Workshop Ian M Davies, Oubay Hassan, Niels Jacob, K Morgan, Aubrey Truman, N P Weatherill, 2003-06-13. This volume contains recent research papers presented at the international workshop on Probabilistic Methods in Fluids held in Swansea. The central problems considered were turbulence and the Navier Stokes equations but as is now well known these classical problems are deeply intertwined with modern studies of stochastic partial differential equations, jump processes and random dynamical systems. The volume provides a snapshot of current studies in a field where the applications range from the design of aircraft through the mathematics of finance to the study of fluids in porous media.

Auditory System E. de Boer, W. Connor, H. Davis, J.J. Eggermont, R. Galambos, C.D. Geisler, G.M. Gerken, H.E. von Gierke, C.S. Hallpike, E.Jr. Hawkins, S.A. Hillyard, W.D. Keidel, D.E. Parker, T.W. Picton, W. Rudmose, F.B. Simmons, G. Stange, C.R. Steele, J. Tonndorf, M.E. Wigand, F. Zöllner, 2012-12-06. After heated and often bitter debates, SIEBENMANN'S opinion finally prevailed, i.e. a contribution to cochlear lesions due to vibrations of the floor transmitted via bone conduction could not be demonstrated. For one thing it was hard to see how appreciable amounts of energy could reach the ears in this manner considering the attenuation that is bound to occur across each of the many joints along the pathway involved. In some older audiological surveys conducted in industry, e.g. TEMKIN 1933, groups of workmen were found who displayed signs of apical turn lesions, i.e. low tone hearing losses for air and for bone. Such lesions could not be expected to result from exposure to air borne sounds because of the low frequency attenuation of the middle ear. Although WITTMAACK'S explanation which was frequently invoked in such reports does no longer appear tenable, such apical turn lesions could conceivably be caused by bone conduction components of high intensity noise in the sense of BEKESY 1948. As far as I am aware of, no newer studies have been conducted in this problem area and the older experiments and/or surveys were done at times before signal parameters could be precisely controlled or measured. A detailed critical review of the older studies on the potential contribution of bone conducted energy to industrial hearing loss and its underlying pathology may be found in WERNER 1940 who incidentally favored SIEBENMANN'S point of view. Partial

Differential Equations V M.V. Fedoryuk, 2012-12-06 In this paper we shall discuss the construction of formal short wave asymptotic solutions of problems of mathematical physics The topic is very broad It can somewhat conveniently be divided into three parts 1 Finding the short wave asymptotics of a rather narrow class of problems which admit a solution in an explicit form via formulas that represent this solution 2 Finding formal asymptotic solutions of equations that describe wave processes by basing them on some ansatz or other We explain what 2 means Giving an ansatz is knowing how to give a formula for the desired asymptotic solution in the form of a series or some expression containing a series where the analytic nature of the terms of these series is indicated up to functions and coefficients that are undetermined at the first stage of consideration The second stage is to determine these functions and coefficients using a direct substitution of the ansatz in the equation the boundary conditions and the initial conditions Sometimes it is necessary to use different ansätze in different domains and in the overlapping parts of these domains the formal asymptotic solutions must be asymptotically equivalent the method of matched asymptotic expansions The basis for success in the search for formal asymptotic solutions is a suitable choice of ansätze The study of the asymptotics of explicit solutions of special model problems allows us to surmise what the correct ansätze are for the general solution

Vibrational-Rotational Excitations in Nonlinear Molecular Systems

Alexander A. Ovchinnikov, Nikolai S. Erikhman, Kirill A. Pronin, 2012-12-06 If there would be no God then what a staff captain am I said one of the characters in a novel by Dostoevskii In a similar way we can exclaim If there would be no nonlinearity than what physics would that be Really the most interesting and exciting effects are described by non linear equations and vanish in the linear approximation For example the general theory of relativity by A Einstein comes to mind first one of the most beautiful physical theories which is in fact essentially nonlinear Next the phase transitions crystal liquid and liquid gas are due to the anharmonic nature of inter particle interactions to dissociation and infinite motion Similarly transitions into the superconducting state or the superfluid would be impossible with purely harmonic interaction potentials Another brilliant achievement in nonlinear physics was the construction of a laser and the subsequent development of nonlinear optics The latter describes the interaction of the matter with light of super high intensity when multi quanta intra molecular transitions become essential Last we should note here the very beautiful mathematical theory the theory of catastrophes Its subject is the study of invariant general properties of multi dimensional surfaces in the vicinity of bifurcation points with respect to continuous transformations
