Americas Alternative Energy Future Report:

America's Energy Future National Research Council, National Academy of Engineering, National Academy of Sciences, Division on Engineering and Physical Sciences, Committee on America's Energy Future, 2010-01-15 For multi user PDF licensing please contact customer service Energy touches our lives in countless ways and its costs are felt when we fill up at the gas pump pay our home heating bills and keep businesses both large and small running There are long term costs as well to the environment as natural resources are depleted and pollution contributes to global climate change and to national security and independence as many of the world's current energy sources are increasingly concentrated in geopolitically unstable regions The country's challenge is to develop an energy portfolio that addresses these concerns while still providing sufficient affordable energy reserves for the nation The United States has enormous resources to put behind solutions to this energy challenge the dilemma is to identify which solutions are the right ones Before deciding which energy technologies to develop and on what timeline we need to understand them better America's Energy Future analyzes the potential of a wide range of technologies for generation distribution and conservation of energy This book considers technologies to increase energy efficiency coal fired power generation nuclear power renewable energy oil and natural gas and alternative transportation fuels It offers a detailed assessment of the associated impacts and projected costs of implementing each technology and categorizes them into three time frames for implementation *Viewing America's Energy Future in Three Dimensions* L. Louis Hegedus, Dorota S. Temple, 2011-06-16 The future of the US energy infrastructure is a major and urgent challenge for our society This monograph was stimulated by a report of the National Academies Committee on America's Energy Future America's Energy Future Technology and Transformation Summary Edition 2009 The report pointed out the critical but poorly understood and little explored role of societal considerations in determining the fate of national energy policies and programs In our efforts to respond to those concerns we have examined the thesis that the three major dimensions of the energy challenge technology economics and societal are overlapping interactive and inseparable therefore they can be understood only when considered simultaneously and discussed in terms of their interactions Correspondingly this monograph describes energy technologies in the context of their economic and societal contexts energy economics in their technological and societal contexts and the societal aspects of energy in their technological and economic contexts The monograph then identifies social science driven research opportunities pertaining to America's energy challenge with the hope that the proposed research will help not only overcome the societal barriers identified by the National Academies report but also harness societal forces in developing a rational energy future North America Council on Foreign Relations, 2014-10-01 This CFR sponsored Independent Task Force report North America Time for a New Focus asserts that elevating and prioritizing the U S Canada Mexico relationship offers the best opportunity for strengthening the United States and its place in the world America's Energy Future United States. Clark,2014-10-07 With the end of the Cold War came not the end of history but the end of America s sense of its strategic purpose in the world Then after a decade of drift the US was violently dragged back into international conflict Its armed forces responded magnificently but its leaders objectives were substantially flawed We fought the wrong war twice for reasons that were opaque and few American citizens understood the cause for which their sons and daughters were fighting and dying War is a poor substitute for strategic vision and decisions made in the heat of imminent conflict are often limited by the emotions of the moment In Don t Wait for the Next War Wesley K Clark a retired four star general of the US army and former Democratic candidate for president presents a compelling argument for continued American global leadership and the basis on which it can succeed a new American strategy America needs both new power and deeper perspective The platform for American leadership is to use America s energy resources to spark sustainable economic growth building new strength to deal with pressing domestic issues like the deficit as well as the longer term challenges to US security terrorism cyber threats the next financial crisis China s rising power and climate change Such a strategy is not only achievable but essential and it is urgently needed This is the true test of American leadership for the next two decades but it must start now so America has the power and vision to deal with the acute crises that will inevitably come in the Mideast Europe or Asia

P. Tomain,2011-06-20 Climate change presents the United States and the world with regulatory problems of a magnitude complexity and scope unseen before The United States however particularly after the mid term elections of 2010 lacks the political will necessary to aggressively address climate change Most current books focus on climate change Ending Dirty Energy Policy argues that the US will not adequately address climate change until it transforms its fossil fuel energy policy Yet there are signs that the country will support the transformation of its century old energy policy from one that is dependent on fossil fuels to a low carbon energy portfolio A transformative energy policy that favors energy efficiency and renewable resources can occur only after the US has abandoned the traditional fossil fuel energy policy has redesigned regulatory systems to open new markets and promoted competition among new energy providers and has stimulated private sector commercial and venture capital investment in energy innovations that can be brought to commercial scale and marketability **Energy Research Abstracts** ,1990 Energy Abstracts for Policy Analysis ,1988 **Energy in**
