Scientific Knowledge and Its Social Problems Jerome R. Ravetz, 2020-09-10 Science is continually confronted by new and difficult social and ethical problems Some of these problems have arisen from the transformation of the academic science of the prewar period into the industrialized science of the present Traditional theories of science are now widely recognized as obsolete In *Scientific Knowledge and Its Social Problems* originally published in 1971 Jerome R. Ravetz analyzes the work of science as the creation and investigation of problems He demonstrates the role of choice and value judgment and the inevitability of error in scientific research Ravetz's new introductory essay is a masterful statement of how our understanding of science has evolved over the last two decades

Empirical Foundations of Information and Software Science Jagdish C. Agrawal, 2012-12-06 The purpose of the Second Symposium on Empirical Foundations of Information and Software Science EFISS was in essence the same as that of the First Symposium in this series i e to explore subjects and methods of scientific inquiry which are of fundamental and common interest to information and software sciences and to map directions of research that will benefit from the mutual interaction of these two fields In fact one of the most important results of the First EFISS Symposium was the conclusion that the commonality of these two sciences is much more than just the commonality of their objects of study namely the study of informative and prescriptive properties of texts in all kinds of sign systems such as natural or artificial languages Rather the most challenging problems appear to be in the areas in which both these sciences overlap such as for instance the problem of trade offs between informative and prescriptive uses of texts This problem can be formulated in generic terms as follows given a certain kind of action or activity which has been prescribed to some agent i e which is required to be implemented or carried out what kind of information should be provided to the agent in what form and how should it be distributed over the contextual structure of the prescriptive text to enable the agent to carry out the action or activity most effectively and efficiently

The Scientific Life Steven Shapin, 2009-08-01 Who are scientists What kind of people are they What capacities and virtues are thought to stand behind their considerable authority They are experts indeed highly respected experts authorized to describe and interpret the natural world and widely

trusted to help transform knowledge into power and profit But are they morally different from other people The Scientific Life is historian Steven Shapin s story about who scientists are who we think they are and why our sensibilities about such things matter Conventional wisdom has long held that scientists are neither better nor worse than anyone else that personal virtue does not necessarily accompany technical expertise and that scientific practice is profoundly impersonal Shapin however here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work From the early twentieth century origins of corporate research laboratories to the high flying scientific entrepreneurship of the present Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live Building on the insights of Shapin s last three influential books featuring an utterly fascinating cast of characters and brimming with bold and original claims The Scientific Life is essential reading for anyone wanting to reflect on late modern American culture and how it has been shaped

Evidence, Argument, and Persuasion in the Policy Process Giandomenico

Majone,1989-01-01 In modern industrial democracies the making of public policy is dependent on policy analysis the generation discussion and evaluation of policy alternatives Policy analysis is often characterized especially by economists as a technical nonpartisan objective enterprise separate from the constraints of the political environment however says the eminent political scientist Giandomenico Majone this characterization of policy analysis is seriously flawed According to Majone policy analysts do not engage in a purely technical analysis of alternatives open to policymakers but instead produce policy arguments that are based on value judgments and are used in the course of public debate In this book Majone offers his own definition of policy analysis and examines all aspects of it from problem formulation and the choice of policy instruments to program development and policy evaluation He argues that rhetorical skills are crucial for policy analysts when they set the norms that determine when certain conditions are to be regarded as policy problems when they advise on technical issues and when they evaluate policy Policy analysts can improve the quality of public deliberation by refining the standards of appraisal of public programs and facilitating a wide ranging dialogue among advocates of different criteria In fact says Majone the essential need today is not to develop objective measures of outcomes the traditional aim of evaluation research but to improve the methods and conditions of public discourse at all levels and stages of policy making

The Art of Empirical Investigation Julian Lincoln Simon,2003-09-12 Julian Simon was known for his methodical and often controversial writings challenging conventional beliefs about overpopulation pollution disappearing farmland and the scarcity of energy sources and raw materials But throughout his works is a common theme that responsible unbiased research and examination of the data is indispensable to formulating a well informed and accurate opinion The Art of

Empirical Investigation teaches student professor researcher and those interested in ascertaining the truth about social issues just how to proceed The Art of Empirical Investigation is a textbook on the basics of social scientific research It discusses all the important empirical methods used in social science and its examples drawn from a wide variety of academic and applied fields illustrate the use of each method in its most appropriate context The actual decisions a researcher must make at every stage of a project are emphasized as well as obstacles to knowledge such as observer bias deception unreliability of data and sampling costs and how to overcome them Presupposing nothing the book introduces the reader to the foundations of empirical social science research regardless of a specific field It also makes an important contribution to beginning researchers understanding of an operational definition of causality which cuts through philosophical obscurity and teaches the researcher how to decide whether or not a given relationship is causal James E Katz contributes an introduction written for this new edition in which he explains why after over three decades this remains one of the best books on research methods around Written in a clear informal style The Art of Empirical Investigation is a must for the student and teacher of the social sciences researchers and journalists Julian L Simon 1932 1998 was professor of business administration at the University of Maryland and Distinguished Senior Fellow of the Cato Institute His books as author or editor include Population Matters Hoodwinking the Nation and The Economics of Population Key Classic Writing all available from Transaction James E Katz is professor of communication at the School of Communication Information and Library Studies at Rutgers University He is the author of Machines That Become Us and Connections both available from Transaction
