1 Crust Mantle Relationships Answers:

Phase Diagrams for Geoscientists Tibor Gasparik, 2013-08-13 The book summarizes the results of the experimental studies of phase relations in the chemical systems relevant to Earth carried out by the author in a time period of over 20 years between 1979 and 2001. It is based on 1000 piston cylinder experiments at pressures up to 4 GPa and close to 700 experiments carried out with a multi anvil apparatus at pressures up to 24 GPa. This is the largest published collection of calculated phase diagrams for the chemical systems relevant to Earth. This is also the first time that the phase relations at the relatively low pressures of the lithospheric mantle mainly applicable to the experimental thermobarometry of metamorphic rocks and mantle xenoliths are seamlessly integrated with the phase relations of the sublithospheric upper mantle and the uppermost lower mantle primarily applicable to inclusions in diamond and shocked meteorites. Tibor Gasparik has devoted his career to determining the high pressure high temperature phase relations of the geologically important Sodium Calcium Magnesium Aluminium Silicon NCMAS oxide system. This book is his opus magnum summarizing more than 1700 experiments in over 120 figures. I have found *Phase Diagrams for Geoscientists* to be a useful first port of call for finding the P-T stability fields and I can recommend the book as a reference for geoscientists requiring an overview of the stable phase assemblages in the top 700 km of the Earth.
