Natural Disasters and Scarring Effects Weicheng Lian, Jose Ramon Moran, Raadhika Vishvesh, 2022-12-16 This paper uses a novel empirical approach following the literature on hysteresis to explore medium term scarring of natural disasters for countries vulnerable to climate change By quantifying the dynamic effects of natural disasters on real GDP per capita for a large number of episodes using a synthetic control approach SCA and focusing on severe shocks we demonstrate that a persistently large deviation of real GDP per capita from the counterfactual trend exists five years after a severe shock in many countries The findings highlight the importance and urgency of building ex ante resilience to avoid scarring effects for countries prone to natural disasters such as those in the Caribbean region

Macroeconomic Risk Management Against Natural Disasters Stefan Hochrainer, 2007-12-14 Looking back in history we conceive the twentieth century as the century of wars Most likely we will conceive the twenty first century as the century of natural catastrophes Wars can be avoided unfortunately it did not happen often in history in contrast most natural disasters are outside human influence However the consequences of disasters can be alleviated by means of risk management For an effective risk management information is needed about i the size of the risk measured by the frequency and intensity of the hazard and ii the degree of vulnerability of the economy and society Stefan Hochrainer's thesis deals with measuring and modeling of both While the physical risk modeling is a well developed area within statistical modeling frequency analysis point processes extreme value theory etc estimating the economic consequences is a more challenging task The author studies economic effects of catastrophes by statistical analysis of macroeconomic data One interesting finding is that disasters can decrease the absolute level of economic performance such as the GDP while keeping growth levels nearly the same at least after some years as in the pre disaster years The boom of new products in the financial markets especially of new derivative instruments has led to new risk hedging instruments such as catastrophe bonds CAT bonds transfer the risk to the market of investors

Natural Disasters, Cultural Responses Christof Mauch, Christian Pfister, 2009-03-16 Catastrophes it seems are becoming more frequent in the twenty first century According to UN statistics every year approximately two hundred million people are directly affected by natural disasters_ seven times the number of people who are affected by war Discussions about global warming and fatal disasters such as Katrina and the Tsunami of 2004 have heightened our awareness of natural disasters and of their impact on both local and global communities Hollywood has also produced numerous disaster movies in recent years some of which have become blockbusters This volume demonstrates that natural catastrophes_ earthquakes hurricanes floods etc _have exercised a vast impact on humans throughout history and in almost every part of the world It argues that human attitudes toward catastrophes have changed over time Surprisingly this has not necessarily led to a reduction of exposure or risk The organization of the book resembles a journey around the globe_ from Europe to North Africa the Middle East and Asia and from the Pacific through South America and Mexico to the United States While natural disasters appear everywhere on the globe different cultures societies and nations have adopted specific styles for coping with disaster Indeed how humans deal with catastrophes depends largely on social and cultural patterns values religious belief systems political institutions and economic structures The roles that catastrophes play in society and the meanings they are given vary from one region to the next they differ_ and this is one of the principal arguments of this book_ from one cultural political and geographic space to the next The essays collected here help us to understand not only how people in different times throughout history have learned to cope with disaster but also how humans in different parts of the world have developed specific cultural social and technological strategies for doing so

Impact Dynamics of Natural

Disasters and the Case of Pacific Island Countries Choonsung Lim, Yue Zhou, 2025-05-02 This paper investigates the short and medium term economic impacts of natural disasters focusing on Pacific Island Countries PICs and using global high frequency nightlight data in addition to macroeconomic data In this paper we identify significant short term effects on growth following natural disasters which are exacerbated by high public debt and heightened climate vulnerability Although the negative impacts generally diminish within a year for most countries PICs face disproportionately larger and rising short term disruptions 1 4 percent of annual potential growth and persistent medium term consequences Further analysis of PICs fiscal external and real sectors following severe disasters using annual economic data reveals that weaker fiscal positions partly driven by reduced output may lead to an upward trend in public debt and increased imports may deteriorate current account balances over the medium term These findings underscore the need for robust counter cyclical policies and proactive investments in climate resilience to mitigate the adverse effects of climate shocks and promote long term economic stability

Understanding the Macroeconomic Effects of Natural Disasters Ha Nguyen, Alan Feng, Mercedes Garcia-Escribano, 2025-02-21 Climate change is causing more frequent and devastating natural disasters The goal of this paper is two fold First it examines the dynamic effects of natural disasters on the growth of output and its components Government expenditure in advanced economies AEs rises immediately in the same year of the natural disaster offsetting the decline in private investment growth and thereby mitigating the negative effect on output growth As a result output growth in AEs is not significantly affected by natural disasters In contrast the increase in government expenditure in emerging markets and developing countries EMDEs after a

natural disaster is smaller and thus unable to mitigate the contemporaneous negative effect on output growth which mainly reflects the fall in investment in non small island EMDEs and in net exports in small island EMDEs In addition the output recovery in the subsequent year does not fully offset the decline during the year of the disaster Second this paper assesses the role of pre existing country characteristics in mitigating the adverse impact of natural disasters The paper finds that small islands and countries with limited pre disaster fiscal space tend to experience more significant declines in output growth following a natural disaster
