The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches This will facilitate a scientific

exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication As such this topic belongs firmly within the field of Cognitive Hearing Science Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan Such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication Such measures might be implemented in relation to the built environment the design of hearing aids and public awareness

Engineering Rumen Metabolic Pathways: Where We Are, and Where Are We Heading Emilio M. Ungerfeld, C. James Newbold, 2018-03-13 Ruminants were domesticated in the Middle East about 10 000 years ago and have since become an inseparable part of human diet society and culture Ruminants can transform inedible plant fiber and non protein nitrogen into meat milk wool and traction thus allowing human utilization of non tillable land and industrial by products The nutritional flexibility of ruminants is conferred by the rumen's complex microbial community Driven by rising income and population growth in emergent economies the global demand for livestock products including milk and meat from ruminants has been increasingly growing and is predicted to continue growing in the next few decades The increase in production

necessary to satisfy this rising demand is putting much pressure on already dwindling natural resources. There are also concerns about the emissions of methane and nitrous oxide potent greenhouse gases associated to ruminant production The need to make ruminant production more efficient in the use of natural resources poses a big challenge to ruminant science and within it rumen microbiology Recent years have seen important advances in basic and applied rumen microbiology and biochemistry. The knowledge generated has significant implications for the efficiency and sustainability of ruminant production and the quality of ruminant products for human health The present compilation is an update of recent advances in rumen microbiology and ruminant digestion and fermentation including original research reviews and hypothesis and theory articles We hope that the experimental results discussion models and ideas presented herein are useful to foster future research contributing to sustainable ruminant production Proceedings of the 2025 4th International Conference on Engineering Management and Information Science (EMIS 2025) Seyed Mohammadreza Ghadiri, Sri Devi Ravana, Mohd Johari Mohd Yusof, Shamzani Affendy Mohd.
