expose the underlying soil to erosion. If overtopping continues long enough, the erosion may eventually result in loss of levee crest elevation and possibly breaching of the protective structure. Hence, protecting levees from erosion by surge overflow and wave overtopping is necessary to assure a viable and safe levee system. This book presents a cutting edge approach to understanding overtopping hydraulics under negative free board of earthen levees and to the study of levee reinforcing methods. Combining soil erosion test, full scale laboratory overtopping hydraulics test and numerical modeling for the turbulent overtopping hydraulics, it provides an analysis that integrates the mechanical and hydraulic processes governing levee overtopping occurrences and engineering approaches to reinforce overtopped levees. Topics covered: surge overflow, wave overtopping and their combination, full scale hydraulic tests, erosion tests, overtopping hydraulics, overtopping discharge and turbulent analysis. This is an invaluable resource for graduate students and researchers working on levee design, water resource engineering, hydraulic engineering and coastal engineering and for professionals in the field of civil and environmental engineering and natural hazard analysis.
