

# Heat

Heat is a form of \_\_\_\_\_. It can be found in natural and \_\_\_\_\_ forms. The greatest natural source of heat on Earth is the \_\_\_\_\_. Without it, no animal or plant life would be able to survive.

\_\_\_\_\_ is a measure of how hot or cold something is. Temperature can be measured in degrees Celsius or degrees Fahrenheit. Thermometers are used to measure temperature. At 100°C water will \_\_\_\_\_ and it will begin to change from a liquid to a gas. At 0°C water will begin to freeze and will start to change from a liquid to a \_\_\_\_\_.

The temperature beneath the surface of the earth is extremely hot. It is here that you will find \_\_\_\_\_, which is melted rock. The heat that is in the Earth can be used in some heating systems, particularly in modern homes. This type of heating is known as \_\_\_\_\_.

Conduction is the name for the \_\_\_\_\_ of heat between objects. Heat flows from more \_\_\_\_\_ hot objects to cooler objects. Some materials allow heat to move through them \_\_\_\_\_ and these materials are called conductors. \_\_\_\_\_ is an example of a good conductor of heat. However, there are also materials that stop heat moving through them and these materials are known as \_\_\_\_\_ that is an example of a good insulator.

Heat can change the \_\_\_\_\_ that some materials take. For example, when we heat chocolate it melts and changes to a liquid. When we take the heat away from the chocolate, its temperature will decrease, and it will become a solid once again. This is sometimes called a \_\_\_\_\_ change.

However, sometimes heat changes the form of a material \_\_\_\_\_. For example, heating an egg in a frying pan will cause the egg to change completely. This change cannot be reversed by cooling things. This change, caused by the heat, is a \_\_\_\_\_ change.
