Robotics and Cognitive Approaches to Spatial Mapping Margaret E. Jefferies,Wai-Kiang Yeap,2008-01-10 This important work is an attempt to synthesize two areas that need to be treated in tandem The book brings together the fields of robot spatial mapping and cognitive spatial mapping which share some common core problems One would expect some cross fertilization of research between the two areas to have occurred yet this has begun only recently There are now signs that some synthesis is happening so this work is a timely one for students and engineers in robotics The 2005 DARPA Grand Challenge Martin Buehler,Karl Iagnemma,Sanjiv Singh,2007-09-06 The DARPA Grand Challenge was a landmark in the field of robotics a race by autonomous vehicles through 132 miles of rough Nevada terrain It showcased exciting and

unprecedented capabilities in robotic perception navigation and control The event took place in October 2005 and drew teams of competitors from academia and industry as well as many garage hobbyists This book presents fifteen technical papers that describe each team's driverless vehicle race strategy and insights As a whole they present the state of the art in autonomous vehicle technology and offer a glimpse of future technology for tomorrow's driverless cars *Springer Handbook of Robotics* Bruno Siciliano, Oussama Khatib, 2008-05-20 With the science of robotics undergoing a major transformation just now Springer's new authoritative handbook on the subject couldn't have come at a better time Having broken free from its origins in industry robotics has been rapidly expanding into the challenging terrain of unstructured environments Unlike other handbooks that focus on industrial applications the Springer Handbook of Robotics incorporates these new developments Just like all Springer Handbooks it is utterly comprehensive edited by internationally renowned experts and replete with contributions from leading researchers from around the world The handbook is an ideal resource for robotics experts but also for people new to this expanding field **Experimental Robotics** Oussama Khatib, Vijay Kumar, Daniela Rus, 2008-01-30 At the dawn of the new millennium robotics is undergoing a major transformation in scope and dimension From a largely dominant industrial focus robotics is rapidly expanding into the challenges of unstructured environments Interacting with assisting serving and exploring with humans the emerging robots will increasingly touch people and their lives The goal of the new series of Springer Tracts in Advanced Robotics STAR is to bring in a timely fashion the latest advances and developments in robotics on the basis of their significance and quality It is our hope that the wider dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field Since its inception wanted by my STAR Co Editor Oussama Khatib some twenty years ago the International Symposium on Experimental Robotics ISER was published by Springer Since the two past editions ISER has found a more suitable home under STAR together with other thematic symposia devoted to excellence in robotics research 3D-Position Tracking and Control for All-Terrain Robots Pierre Lamon, 2008-02-12 Rough terrain robotics is a fast evolving field of research and a lot of effort is deployed towards enabling a greater level of autonomy for outdoor vehicles This book demonstrates how the accuracy of 3D position tracking can be improved by considering rover locomotion in rough terrain as a holistic problem Although the selection of appropriate sensors is crucial to accurately track the rover's position it is not the only aspect to consider Indeed the use of an unadapted locomotion concept severely affects the signal to noise ratio of the sensors which leads to poor motion estimates In this work a mechanical structure allowing smooth motion across obstacles with limited wheel slip is used In particular it enables the use of odometry and inertial sensors to improve the position estimation in rough terrain A method for computing 3D motion increments based on the wheel encoders and chassis state sensors is developed Because it accounts for the kinematics of the rover this method provides better results than the standard approach To further improve the accuracy of the position

tracking and the rover's climbing performance a controller minimizing wheel slip is developed The algorithm runs online and can be adapted to any kind of passive wheeled rover Finally sensor fusion using 3D Odometry inertial sensors and visual motion estimation based on stereovision is presented The experimental results demonstrate how each sensor contributes to increase the accuracy and robustness of the 3D position estimation The Route to Patient Safety in Robotic Surgery

Lorenzo Grespan, Paolo Fiorini, Gianluca Colucci, 2018-12-13 The introduction of a new technology in a consolidated field has the potential to disrupt usual practices and create a fertile ground for errors An example is robotic surgery that is now used in most surgical specialties pushed by technology developers and enthusiastic surgeons To analyze the potential impact of robotic surgery on patient safety a consortium of major European Universities started the project SAFROS whose findings are summarized and further elaborated in the three parts of this book Part one describes safety in complex systems such as surgery how this may disrupt the traditional surgical workflow how safety can be monitored and the research questions that must be posed Part two of the book describes the main findings of this research by identifying the risks of robotic surgery and by describing where its ancillary technologies may fail This part addresses features and evaluation of anatomic imaging and modeling actions in the operating room robot monitoring and control operator interface and surgical training Part three of the book draws the conclusions and offers suggestions on how to limit the risks of medical errors One possible approach is to use automation to monitor and execute parts of an intervention thus suggesting that robotics and artificial intelligence will be major elements of the operating room of the future **Field and Service Robotics** Christian Laugier, Roland

Siegwart, 2008-06-19 FSR the International Conference on Field and Service Robotics is a robotics Symposium which has established over the past ten years the latest research and practical results towards the use of field and service robotics in the community with particular focus on proven technology The first meeting was held in Canberra Australia in 1997 Since then the meeting has been held every two years in the pattern Asia America Europe This book presents the results of the sixth edition of Field and Service Robotics FSR03 held in Chamonix France on 9th 12th July 2003 The conference provided a forum for researchers professionals and robot manufacturers to exchange up to date technical knowledge and experience Field robots are non factory robots typically mobile that operate in complex and dynamic environments on the ground of Earth or planets under the ground underwater in the air or in space Service robots are those that work closely with humans to help them with their lives This book offers a collection of a broad range of topics including Underwater Robots and Systems Autonomous Navigation for Unmanned Aerial Vehicles Simultaneous Localization and Mapping Climbing Robotics Sensor Fusion
