Between Worlds Linda Chisholm, 2017-11-30 How the story of how missionary schools adopted the Bantu education reforms gives insight into the ongoing legacy of the apartheid in the South African educational system The transition from apartheid to the post apartheid era has highlighted questions about the past and the persistence of its influence in present day South Africa This is particularly so in education where the past continues to play a decisive role in relation to inequality Between Worlds German Missionaries and the Transition from Mission to Bantu Education in South Africa scrutinises the experience of a hitherto unexplored German mission society probing the complexities and paradoxes of social change in education It raises challenging questions about the nature of mission education legacies Linda Chisholm shows that the transition from mission to Bantu Education was far from seamless Instead past and present interpenetrated one another with resistance and compliance cohabiting in a complex new social order At the same time as missionaries complied with the new Bantu Education dictates they sought to secure a role for themselves in the face of demands of local communities for secular state controlled education When the latter was implemented in a perverted form from the mid 1950s one of its tools was textbooks in local languages developed by mission societies as part of a transnational project with African participation Introduced under the guise of expunging European control Bantu Education merely served to reinforce such control The response of local communities was an attempt to domesticate and master the foreign body of the mission so as to create access to a larger world This book focuses on the ensuing struggle fought on many fronts including medium of instruction and textbook content with concomitant sub texts relating to gender roles and sexuality South Africa s educational history is to this day informed by networks of people and ideas crossing geographic and racial boundaries The colonial legacy has inevitably involved cultural mixing and hybridisation with paradoxically parallel pleas for purity Chisholm explores how these ideas found expression in colliding and coalescing worlds one African the other European caught between mission and apartheid education

*Translanguaging, Coloniality and Decolonial Cracks* Robyn Tyler, 2023-01-13 In this linguistic ethnography of bilingual science learning in a South African high school the author connects microanalyses of classroom discourse to broader themes of decoloniality in education The book challenges the deficit narrative often used to

characterise the capabilities of linguistically minoritised youth and explores the challenges and opportunities associated with leveraging students full semiotic repertoires in learning specific concepts The author examines the linguistic landscape of the school and the beliefs and attitudes of staff and students which produce both coloniality and cracks in the edifice of coloniality A critical translanguaging lens is applied to analyse multilingual and multimodal aspects of students science meaning making in a traditional classroom and a study group intervention Finally the book suggests implications for decolonial pedagogical translanguaging in Southern multilingual classrooms *The African Book Publishing Record* ,2008

**in Print** ,1978 **The African Mother Tongue and Mathematical Ideas** Abdul Karim Bangura,2020-06-02 This book by renowned scholar Dr Abdul Karim Bangura combines linguistics and mathematics to show how and why African centred mathematical ideas can be a driving force in Africa s development efforts Bangura explores the concept that Africa has been the centre of the History of Mathematics for thousands of years as the civilizations that emerged across the continent developed contributions which would enrich both ancient and modern understanding of nature through mathematics However scholars and other professionals working in the field of mathematics education in Africa have identified a plethora of issues in carrying out their tasks This is highlighted by one of the most compelling arguments in the book which is that a major reason for these problems is the fact that the African mother tongues has been greatly neglected in the teaching of mathematics in the continent Bangura asserts that a change has to be made in order for Africa to benefit from the exceptional opportunities mathematics offer showing that even if there is a great body of work connecting linguistics and mathematics few analyses have been performed on the link between African languages and mathematics and the ones that have been made are not theoretically grounded on linguistics Thus the book begins by identifying the objects of study of

linguistics and mathematics and delineates which ones they have in common Next since the object of study of linguistics is language the nine design features of language are employed to examine each of the objects as it pertains to African languages After that mathematical ideas of sustainability and those of tipping points are suggested as means to help Africa's development efforts
