*Face Processing: Advanced Modeling and Methods* Wenyi Zhao, Rama Chellappa, 2011-07-28 Major strides have been made in face processing in the last ten years due to the fast growing need for security in various locations around the globe. A human eye can discern the details of a specific face with relative ease. It is this level of detail that researchers are striving to create with ever evolving computer technologies that will become our perfect mechanical eyes. The difficulty that confronts researchers stems from turning a 3D object into a 2D image. That subject is covered in depth from several different perspectives in this volume. *Face Processing: Advanced Modeling and Methods* begins with a comprehensive introductory chapter for those who are new to the field. A compendium of articles follows that is divided into three sections. The first covers basic aspects of face processing from human to computer. The second deals with face modeling from computational and physiological points of view. The third tackles the advanced methods which include illumination, pose, expression and more. Editors Zhao and Chellappa have compiled a concise and necessary text for industrial research scientists, students and professionals working in the area of image and signal processing. Contributions from over 35 leading experts in face detection, recognition and image processing. Over 150 informative images with 16 images in FULL COLOR illustrate and offer insight into the most up to date advanced face processing methods and techniques. Extensive detail makes this a need to own book for all involved with image and signal processing.

**Signal and Image Processing for Biometrics** Amine Nait-Ali, Régis Fournier, 2012-12-17 The aim of this book is to deal with biometrics in terms of signal and image processing methods and algorithms. This will help engineers and students working in digital signal and image processing deal with the implementation of such specific algorithms. It discusses numerous signal and image processing techniques that are very often used in biometric applications. In particular, algorithms related to hand feature extraction, speech recognition, 2D/3D face biometrics, video surveillance and other interesting approaches are presented. Moreover, in some chapters, Matlab codes are provided so that readers can easily reproduce some basic simulation results. This book is suitable for final year undergraduate students, postgraduate students, engineers and researchers in the field of computer engineering and applied digital signal and image processing.
