The Plant Hormone Ethylene Antonio Ferrante, Sergi Munné-Bosch, Nafees A. Khan, 2022-12-05 The *Plant Hormone Ethylene Stress Acclimation and Agricultural Applications* presents current knowledge on our understanding of ethylene perception and signaling its role in the regulation of plant physiological processes and its contribution to acclimation in stressful environments Plants regularly face environmental constraints due to their immobile nature In persistently changing environmental conditions several stress factors influence cellular metabolism ultimately causing reduced plant growth and development with a significant loss in agricultural productivity Sustainable agriculture depends on the acclimation of plant processes to the changing environment through altered physiological and molecular responses which are controlled by plant hormones including ethylene Ethylene interacts with other plant hormones and

signaling molecules to regulate several cellular processes plant growth and development and ultimately crop productivity This book begins with an introduction to ethylene before providing a detailed study of the latest findings on the role of ethylene in plants including its role in photosynthetic processes flower development leaf senescence nutrients acquisition and regulation of abiotic stress responses as well as its application in agriculture The book is an ideal guide for researchers exploring plant physiology and biochemistry as well as for those investigating the use of ethylene knowledge in agriculture in persistently changing environmental conditions Provides state of the art insights into ethylene regulated photosynthesis growth and productivity in crop plants Presents regulatory mechanisms of ethylene action Assists in developing physiomolecular strategies for augmenting crop performance in persistently changing environmental conditions

Phytohormones in Abiotic Stress Dhandapani Raju, R Ambika Rajendran, Ayyagari Ramlal, Virendra Pal Singh, 2024-06-14 Plants are continuously exposed to different environmental stresses that negatively impact their physiology and morphology resulting in production reduction As a result of constant pressure plants evolve different mechanisms for sustenance and survival Hormones play a major role in defences against the stresses and stimulate regulatory mechanisms One of the ways through which they mitigate stress is via the production of hormones like auxins ethylene jasmonic acid etc The phytohormones help in signaling and enhance the chances of their survival Plant hormones play many vital roles from integrating developmental events physiological and biochemical processes to mediating both abiotic and biotic stresses This book aims to highlight these issues and provide scope for the development of tolerance in crops against abiotic stresses to maximize yield for the growing population There is an urgent need for the development of strategies methods and tools for the broad spectrum tolerance in plants supporting sustainable crop production under hostile environmental conditions The salient features are as follows It includes both traditional and non traditional phytohormones and focuses on the latest progress emphasizing the roles of different hormones under abiotic stresses It provides a scope of the best plausible and suitable options for overcoming these stresses and puts forward the methods for crop improvement It is an amalgamation of the biosynthesis of phytohormones and also provides molecular intricacies and signalling mechanisms in different abiotic stresses This book serves as a reference book for scientific investigators from recent graduates academicians and researchers working on phytohormones and abiotic stresses

Pesticides Documentation Bulletin, 1968 *Biostimulants for Crops from Seed Germination to Plant Development*
Shubhpriya Gupta, Johannes Van Staden, 2021-06-23. *Biostimulants for crops from seed germination to plant development* focuses on the effects and roles of natural biostimulants in every aspect of plant growth development to reduce the use of harmful chemical fertilizers and pesticides. Biostimulants are a group of substances of natural origin that offer a potential to reduce the dependency on harmful chemical fertilizers causing environmental degradation. While there is extensive literature on biostimulants, there remains a gap in understanding how natural biostimulants work and their practical application. This book fills that gap, presenting the ways in which biostimulants enhance seed vigor and plant productivity by looking into their mode of action, an area still being researched for deeper understanding. Exploring the roles of seed germination, pollen tube formation, pollen-pistil interaction, flower and fruit setting, to plant pigments, rhizospheric and soil microorganisms, the book also sheds light on the challenges and realistic opportunities for the use of natural biostimulants. Approaches biostimulant research with the goal of transforming scientific research into practical application. Includes real world examples from laboratory, greenhouse, and field experiments. Presents the biochemical, physiological, and molecular mode of action of biostimulants.
