The Testing Charade Daniel Koretz, 2017-08-31 For decades we've been studying experimenting with and wrangling over different approaches to improving public education and there's still little consensus on what works and what to do The one thing people seem to agree on however is that schools need to be held accountable we need to know whether what they're doing is actually working But what does that mean in practice High stakes tests Lots of them And that has become a major problem Daniel Koretz one of the nation's foremost experts on educational testing argues in *The Testing Charade* that the whole idea of test based accountability has failed it has increasingly become an end in itself harming students and corrupting the very ideals of teaching In this powerful polemic built on unimpeachable evidence and rooted in decades of experience with educational testing Koretz calls out high stakes testing as a sham a false idol that is ripe for manipulation and shows little evidence of leading to educational improvement Rather than setting up incentives to divert instructional time to pointless test prep he argues we need to measure what matters and measure it in multiple ways not just via standardized tests Right now we're lying to ourselves about whether our children are learning And the longer we accept that lie the more damage we do It's time to end our blind reliance on high stakes tests With *The Testing Charade* Daniel Koretz insists that we face the facts and change course and he gives us a blueprint for doing better

David N. Figlio,Cecilia Elena

Rouse,2008 We study the effects of the threat of school vouchers and school stigma in Florida on the performance of low performing schools using student level data from a subset of districts Estimates of the change in school level high stakes test scores from the first year of the reform are consistent with the early results used by the state of Florida to claim large scale improvements associated with the threat of voucher assignment However we also find that much of this estimated effect may be due to other factors While we estimate a small relative improvement in reading scores on the high stakes test for voucher threatened stigmatized schools we estimate a much smaller relative improvement on a lower stakes nationally norm referenced test Further the relative gains in reading scores are explained largely by changing student characteristics We find more evidence for a positive differential effect on math test scores on both the low and highstakes tests however the results from the lower stakes test appear primarily limited to students in the high stakes grade Finally we find some evidence that the relative improvements following the introduction of the A Plan by low performing schools were more due to the stigma of receiving the low grade rather than the threat of vouchers Abstract **Policy and Practice** Thomas E.
