Conner, 2003-10-04 First Published in 2004 The terms assessment and testing conjure up all sorts of images in most people s minds Rows of desks in quiet halls working to the clock trying to remember the answers to obscure and sometimes irrelevant questions Recent invitations to teachers to reflect upon an occasion when they remember being assessed or tested drew up long forgotten memories of the 11 plus or taking a first driving test Often these were memories tinged with unhappiness sadness and a feeling of failure Assessment for many of us has been an emotional experience and it is not surprising that we should reject facing children with such experiences too early in their lives This book looks at assessment as a positive experience in the primary classroom as a fundamental feature of teaching and successful learning      **Leap Test Prep**

**Bringing Communities Together** Bev France, Vicki Compton, 2012-07-30 Over recent years connective partnerships between educational communities and sectors outside of education have become increasingly popular One significant reason behind this popularity has the expansion of information and communication technologies which have increased access and provided mechanisms for ongoing connections to be made between differing worlds But successful connections that cross cultural boundaries are not easy to establish and even harder to maintain in ways that are mutually beneficial This book focuses on science and technology connective ventures and the complexity inherent in bringing such worlds together The authors have been in the business of developing such connections and this book brings them together to describe how and why making connections can support the science technology education sector the technology science communities and the wider sociocultural life we all inhabit A range of illustrative examples of connections in action provide an empirical basis from which to explore and gain insight into the issues for and potential of such connective ventures alongside a rich mix of critical commentary arguments cautions and challenges Five key principles have been distilled from the collective experience and wisdom of the authors serving to capture that which underpins effective and efficient connective initiatives Each principle is accompanied by a set of questions that reflect the issues raised

and successes illustrated throughout the book It is hoped these principles and questions will serve to guide people interested in developing funding and or participating in future connective initiatives in the fields of science and technology **Science Education for Diversity** Nasser Mansour,Rupert Wegerif,2013-06-18 Reflecting the very latest theory on diversity issues in science education including new dialogic approaches this volume explores the subject from a range of perspectives and draws on studies from around the world The work discusses fundamental topics such as how we conceptualize diversity as well as examining the ways in which heterogeneous cultural constructs influence the teaching and learning of science in a range of contexts Including numerous strategies ready for adoption by interested teachers the book addresses the varied cultural factors that influence engagement with science education It seeks answers to the question of why increasing numbers of students fail to connect with science education in schools and looks at the more subtle impact that students individually constructed identities have on the teaching and learning of science Recognizing the diversity of its audience the book covers differing levels and science subjects and examines material from a range of viewpoints that include pedagogy curricula teacher education learning gender religion and ICT as well as those of in service and trainee teachers at all levels

**Only in New Orleans** Luis Mirón, Brian R. Beabout, Joseph L. Boselovic, 2015-07-22 With 2015 marking the 10th commemoration of Hurricane Katrina education reform in New Orleans continues to garner substantial local national and international attention Advocates and critics alike have continued to cite test scores new school providers and different theories of governance in making multiple arguments for and against how contemporary education policy is shaping public education and its role in the rebuilding of the city Rather than trying to provide a single unified account of education reform in New Orleans the chapters in this volume provide multiple ways of approaching some of the most significant questions around school choice and educational equity that have arisen in the years since Katrina This collection of research articles essays and journalistic accounts of education reform in New Orleans collectively argues that the extreme makeover of the city's public schools toward a new market based model was shaped by many local historically specific conditions In consequence while the city's schools have been both heralded as a model for other cities and derided as a lesson in the limits of market based reform the experience of education reform that has taken place in the city and its impacts on the lives of students families and educators could have happened only in New Orleans
