Shiwaku,Aiko Sakurai,Rajib Shaw,2016-06-02 Education is regarded as a cross cutting issue for disaster risk reduction DRR through reviewing the Sendai Framework for DRR SFDRR 2015 2030 Mainstreaming Disaster Risk Reduction DRR in the education sector is one of the important efforts to enhance resilience in a community DRR in the education sector not only focuses on provision of disaster education but also includes securing a safe school environment developing school disaster management plans and building the capacity of school teachers and local educational officers Japan with its wealth of experience in DRR has developed a good resilient system in its education sector which has been tested and revised through experiences of past disasters This book reviews the evolution of DRR in the education sector in Japan including some of the recent developments after the 2011 Great East Japan Earthquake focusing on DRR governance and practices in national policies curriculum development and teacher training community linkage and international cooperation to enhance resilience in the education sector The primary target groups for this book are students and researchers in the fields of disaster management and DRR studies Another target group comprises practitioners and policy makers who will be able to apply the collective knowledge from this work to policy and decision making The book provides an overview of the current research trends and furnishes basic knowledge on this important topic *Masters of Mathematics* Robert A. Nowlan,2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It s not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics

The Teaching and Learning of Mathematics at University Level Derek Holton,2006-04-11 This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level As such it is one of a number of such studies that ICMI has commissioned The other Study Volumes cover assessment in mathematics education gender equity research in mathematics education the teaching of geometry and history in mathematics education All of these Study Volumes represent a statement of the state of the art in their respective areas We hope that this is also the case for the current Study

Volume The current study on university level mathematics was commissioned for essentially four reasons First universities world wide are accepting a much larger and more diverse group of students than has been the case Consequently universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past As a result the educational and pedagogical issues facing universities have changed Second although university student numbers have increased significantly there has not been a corresponding increase in the number of mathematics majors Hence mathematics departments have to be more aware of their students needs in order to retain the students they have and to attract future students As part of this awareness departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past

Twenty-Twenty Hindsight Mosiuoa Sekese, 2013-05-16

Twenty twenty hindsight means perfect understanding of events only after they have happened In his book Mosiuoa Sekese looks back on his life in the old and new South Africa and gives his own perceptive interpretation of the past events Sekese suffered discrimination and prejudice under the old apartheid government as well as the new democratic regime His story is highly personal but provides the reader with unique insights into the social and educational challenges that South Africa continues to grapple with I had a quick read and I find the content heartbreaking but fascinating Especially as a white South African you are drawing me into a world that I always knew existed but which few people have the guts and conviction to paint into words Louise Heystek Emerton CEO Wordwise Khuluma Awethu
