Information Visualization Robert Spence, 2014-11-03 Information visualization is the act of gaining insight into data and is carried out by virtually everyone It is usually facilitated by turning data often a collection of numbers into images that allow much easier comprehension Everyone benefits from information visualization whether internet shopping investigating fraud or indulging an interest in art So no assumptions are made about specialist background knowledge in for example computer science mathematics programming or human cognition Indeed the book is directed at two main audiences One comprises first year students of any discipline The other comprises graduates again of any discipline who are taking a one or two year course of training to be visual and interaction designers By focusing on the activity of design the pedagogical approach adopted by the book is based on the view that the best way to learn about the subject is to do it to be creative not to prepare for the ubiquitous examination paper The content of the book and the associated exercises are typically used to support five creative design exercises the final one being a group project mirroring

the activity of a consultancy undertaking a design not an implementation for a client Engagement with the material of this book can have a variety of outcomes The composer of a school newsletter and the applicant for a multi million investment should both be able to convey their message more effectively and the curator of an exhibition will have new presentational techniques on their palette For those students training to be visual interaction designers the exercises have led to original and stimulating outcomes *Jet*, 2007-07-23 The weekly source of African American political and entertainment news
