

**10. LIQUID WEIGHT.** Water ballast should be used with discrimination and, in most cases, is completely unnecessary for the B-250 when operating with three-point linkage and weight transfer or with the automatic hitch attachment.

Tractor tyre tubes can be (3/4) three-quarters filled with liquid using clean water for temperatures above freezing (+32°F.). A calcium chloride ( $\text{CaCl}_2$ ) solution is recommended when operating in freezing temperatures.

#### METHOD OF PUTTING LIQUID INTO TUBE

Secure an adaptor. (See *Illustr. 5*).

The adaptor is provided with a bleeder for letting out the air displaced by the liquid.

Jack up the tractor and revolve tyre so that the valve stem is at the top. Remove the valve core housing and screw on the adaptor, then attach the water hose to the adaptor.

*Illustr. 6 - Tyres three-quarters full of liquid*

The liquid can be put into the tube from a tank, placed at least (5) five feet higher than the tyre, by using a hand force pump or by using compressed air and pressure tank filled with liquid.

When liquid level is as required remove hose and adaptor then replace the valve core housing and inflate the tyre to the correct pressure.

#### LIQUID WEIGHT FOR FREEZING TEMPERATURES

Calcium chloride solution using a 25% mixture, which is approximately 20 lbs. of flaked calcium chloride to 8-1/2 Imp. gallons of water, is recommended when freezing temperatures prevail. The strength

of the solution can be checked with a battery hydrometer. A 25% solution measures approximately 1.255 specific gravity and has a freezing point of 25°F. below zero.

**CAUTION:** Some calcium chloride flakes have an acid reaction. It is advisable to add (1) one pound of lime to each (100) hundred pounds of calcium chloride used.

When preparing a calcium chloride solution always pour the water into the container first, then add the correct amount of calcium chloride flakes stirring the mixture thoroughly.

Never put the water on the calcium chloride flakes. After the solution is mixed, allow it to cool before using. Never use calcium chloride in a cooling system.

*Illustr. 7 - Tractor Seat Adjustment*

- A. Capscrews
- B. Seat support bracket
- C. Seat lugs

**11. TRACTOR SEAT.** The tractor seat is adjustable, therefore, before starting the tractor the operator should adjust the seat to obtain the most comfortable position.

The total seat adjustment is 2-3/8" which can be obtained quite easily by following the procedure outlined below:-

Remove (1) one cap screw from each lug but leave each centre cap screw (nuts loosened) in position. Now slide the seat support bracket forwards or backwards accordingly. Replace and tighten up the cap screws very carefully.
