Biological terms: Interphase, Anaphase, Metaphase, Telophase, Collenchyma, phloem, Sclerenchyma, Parenchyma, cuticula, Transpirations, stomata, neuron, organic compound, connective tissue, chromatin, chromosome, foramen magnum, axial skeleton, cranium	
Chemistry of life	Cells
Difference between organic and inorganic compounds	Difference between animal cell and plant cell
Examples of organic and inorganic compounds	All the cell organelles and functions/rolls
Monomers of all organic compound	Describe the build of the nucleus, mitochondria, and chloroplast
Elements of all the organic compounds	Investigation: Osmose and diffusion (Look at the apparatus that we use and how to set up this Investigation)
Vitamins A, B, C, D, and E, and there deficiency diseases they can cause	Explain osmose and diffusion
Enzymes	
- Lock and key model	
- Function of enzymes	
Influence of temperature and pH on enzyme action	
Mitosis	Plant tissue
All the phases can identify and give reasons for your answers	Build and function of: Collenchyma, Sclerenchyma, Parenchyma, Phloem, Xylem and stomata
Product of Mitosis	Definition of tissue
Difference between telophase in plant cells and animal cells	
Biological importance of Mitosis	
Cancer: - Uncontrolled cell division and growth: Causes and treatment of cancer	
	Function and build of: Stomata, Xylem, and root hair
	Adaptions of Xylem for movement of water upwards
Animal tissue	Plant organs
Name and identify all the animal tissues and where in the human body are they located.	The labels and functions of the dorsiventral leaf.
Functions of all the animal tissues	Adaptions of the different parts of the leaf
Name all the connective tissues	Definition of an organ
Support and transport in plants	Support in animals
Labels of dicotyledonous stem and root	All the labels of the skeleton
Difference between a dicotyledons root and stem	Where do we find long bones in the skeleton
Investigation: The rate of transpirations (Potometer)	Function of the skeleton
The effect of environmental factors on transpiration (Wind, Temperature and Light.)

Processes of Believing: The Acquisition, Maintenance, and Change in Creditions Hans-Ferdinand Angel, Lluís Oviedo, Raymond F. Paloutzian, Anne L.C. Runehov, Rüdiger J. Seitz, 2017-04-13 This volume answers the question Why do we believe what we believe It examines

current research on the concept of beliefs and the development in our understanding of the process of believing It takes into account empirical findings in the field of neuroscience regarding the processes that underlie beliefs and discusses the notion that beyond the interactive exploratory analysis of sensory information from the complex outside world humans engage in an evaluative analysis by which they attribute personal meaning and relevance to the probabilistic representations of objects and events Beliefs exert a strong influence on behaviour decision making and identifying and solving problems Despite their importance beliefs have until recently not been at the centre of scientific interest In fact belief is an ill defined phenomenon From a transdisciplinary perspective the actual approaches to understanding belief seem incompatible as they attempt to highlight such different topics as belief religion belief spirituality belief faith belief knowledge belief attitude belief disbelief belief illusion and believing brain function This situation contradicts the idea that belief is close to pathological phenomena and that it should be eliminated from scientific discussions Rather believing is fundamental for understanding the many problems of every day life In fact the book shows that beliefs are relevant for politics international affairs economy law or religions also in modern societies This book presents the increasing scientific interest in beliefs and believing and reflects the change in focus from the content aspect of belief towards the fluid nature of believing

Towards an embodied science of intersubjectivity: Widening the scope of social understanding research Ezequiel Di Paolo,Hanne De Jaegher,2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people s intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds These phenomena include acting and perceiving together verbal and non verbal engagement experiences of dis connection management of relations in a group joint meaning making

intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large To contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory
