

# ACID ALKALINE KNOWLEDGE CHART

A healthy body maintains a balance of alkaline/acid. However, medications, sugars, stress, and a poor diet can make the body more acidic opening the gates for many health problems including the leaching of minerals, such as calcium. Diet choices are essential in keeping pH levels stable at around pH 7.36.

The body needs balanced pH levels for healthy function and disease prevention. A healthy body maintains blood pH within the narrow range of 7.36 to 7.45, making it slightly alkaline. Blood with a pH below 7.35 is considered too acidic—blood pH above 7.45 presents as too alkaline. Foods divide into acid or alkaline, depending on the residue they leave in the body after being metabolised. Knowing which foods affect the body's pH helps establish a balanced diet that leads to optimal health.

6 pH - 7 pH	7.36 pH - 7.42 pH	7.8 pH - 8 pH	<b>ACIDOSIS</b> is a condition with excess acid in the body fluids. It causes rapid breathing, confusion, tiredness, headache, jaundice, and increased heart rate.
Acidosis Illness	Normal Blood pH Range	Alkalosis Illness	<b>ALKALOSIS</b> presents excessive blood alkalinity with symptoms such as tremors, lightheadedness, nausea and muscle spasms.

Foods are classified on how much acid they produce when digested. Raw and cooked foods vary in levels. Acid-forming foods produce a pH lower than 7, while alkaline foods result in a pH greater than 7. Dietary advice indicates avoiding acid-forming foods, such as meat, dairy, fish, eggs, grains, and alcohol and consuming plenty of alkaline-forming foods, such as fruits, vegetables, nuts, and legumes. Research indicates that an alkaline diet has health benefits, including bone health, cancer prevention, liver health and heart health. As an alkaline diet emphasises the consumption of fruit and vegetables, it also promotes weight loss.
