

ACS Standardized Final Exam Review Suggestions

This is by no means a comprehensive list of topics to study. I simply went through the ACS Study Guide and identified topics that have been covered throughout the semester and should therefore be reviewed. If you find any major conflicts in this list please let me know. This is meant to help you find areas you need to focus on the most. The best advice for studying for the final is PRACTICE. I would also suggest not writing directly in your study guide so that you can go over it multiple times without the answers already being there. Additionally, you will be reusing this guide for the comprehensive Organic Chemistry II Final Exam next semester.

- Nomenclature
 - Focus on what functional groups have been covered in this semester
 - Go over the remaining functional groups that have not been covered yet and just be familiar with the name endings, substituent names, etc.
- Structure Hybridization, Resonance, Aromaticity
 - Lewis Dot Structures and proper formal charge assignment
 - VSEPR theory and hybridization
 - General MO Theory – sigma and pi bonds formed from hybridization
 - Carbocation stability
 - Condensed, molecular, and structural formulas
 - Intermolecular forces and strengths
 - Isomer types
 - Resonance
- Acids and Bases
 - Lewis Acid-Base definitions
 - Resonance effects on acidity/basicity
 - pH and pK_a relationships to acidity/basicity
 - Inductive effect
 - Effect of s- and p-characters on acidity/basicity
- Stereoisomerism
 - Nomenclature – R/S, cis/trans, E/Z, chiral, achiral, stereocenter, racemic, etc.
 - Be able to determine the stereochemistry around a chiral center
 - Chair conformations
 - Newman projections
 - Fischer projections
 - Any differences in physical properties of different types of isomers
 - Stereochemistry of electrophilic addition and substitution reactions
- Nucleophilic Substitutions and Eliminations
 - All details for S_N1, S_N2, E1, and E2 reactions
 - Mechanisms of reactions
 - Rate laws
 - Trends in nucleophilicity
 - Trends in leaving groups
 - Stereochemical difference in reactions
 - Structural effects on nucleophilicity/basicity
 - Carbocation rearrangements
- Electrophilic Additions

Peer-Led Team Learning: Evaluation, Dissemination, and Institutionalization of a College Level Initiative Leo Gafney,Pratibha Varma-Nelson,2008-06-24

There seems to be no end to the flood of conferences workshops panel discussions reports and research studies calling for change in the introductory science courses in our colleges and universities But there comes a time to move from criticism to action In 1993 the Division of Undergraduate Education of the National Science Foundation called for proposals for systemic initiatives to change the way introductory chemistry is taught One of the five awards was to design develop and implement the peer led Workshop a new structure to help students learn science This book is a study of 15 years of work by the Peer Led Team Learning PLTL project a national consortium of faculty learning specialists and students The authors have been in the thick of the action as project evaluator Gafney and co principle investigator Varma Nelson Readers of this book will find a story of successful change in educational practice a story that continues today as new institutions faculty and disciplines adopt the PLTL model They will learn the model in theory and in practice and the supporting data that encourage others to adopt and adapt PLTL to new situations Although the project has long since lost count of the number of implementations of the model conservative estimates are that more than 100 community and four year colleges and a range of universities have adopted the PLTL model to advance student learning for more than 20 000 students in a variety of STEM disciplines

Best Practices for Flipping the College Classroom Julie B. Waldrop,Melody A. Bowdon,2015-06-26 Best Practices for Flipping the College Classroom provides a comprehensive overview and systematic assessment of the flipped classroom methodology in higher education The book Reviews various pedagogical theories that inform flipped classroom practice and provides a brief history from its inception in K 12 to its implementation in higher education Offers well developed and instructive case studies chronicling the implementation of flipped strategies across a

broad spectrum of academic disciplines physical environments and student populations Provides insights and suggestions to instructors in higher education for the implementation of flipped strategies in their own courses by offering reflections on learning outcomes and student success in flipped classrooms compared with those employing more traditional models and by describing relevant technologies Discusses observations and analyses of student perceptions of flipping the classroom as well as student practices and behaviors particular to flipped classroom models Illuminates several research models and approaches for use and modification by teacher scholars interested in building on this research on their own campuses The evidence presented on the flipped classroom methodology by its supporters and detractors at all levels has thus far been almost entirely anecdotal or otherwise unreliable Best Practices for Flipping the College Classroom is the first book to provide faculty members nuanced qualitative and quantitative evidence that both supports and challenges the value of flipping the college classroom

Essentials of Physical Chemistry Don Shillady,2011-07-27 At a time when U S high school students are producing low scores in mathematics and science on international examinations a thorough grounding in physical chemistry should not be considered optional for science undergraduates Based on the author s thirty years of teaching Essentials of Physical Chemistry merges coverage of calculus with chemistry and molecular physics in a friendly yet thorough manner Reflecting the latest ACS guidelines the book can be used as a one or two semester course and includes special topics suitable for senior projects The book begins with a math

and physics review to ensure all students start on the same level and then discusses the basics of thermodynamics and kinetics with mathematics tuned to a level that stretches students abilities It then provides material for an optional second semester course that shows students how to apply their enhanced mathematical skills in a brief historical development of the quantum mechanics of molecules Emphasizing spectroscopy the text is built on a foundation of quantum chemistry and more mathematical detail and examples It contains sample classroom tested exams to gauge how well students know how to use relevant formulas and to display successful understanding of key concepts Coupling the development of mathematical skills with chemistry concepts encourages students to learn mathematical derivations Mini biographies of famous scientists make the presentation more interesting from a people point of view Stating the basic concepts of quantum chemistry in terms of analogies provides a pedagogically useful technique Covering key topics such as the critical point of a van der Waals gas the Michaelis Menten equation and the entropy of mixing this classroom tested text highlights applications across the range of chemistry forensic science pre medical science and chemical engineering In a presentation of fundamental topics held together by clearly established mathematical models the book supplies a quantitative discussion of the merged science of physical chemistry Performance and Judgment Clifford Adelman,1988 **Guide to Educational Credit by**
