**Introduction to Educational Research** W. Newton Suter, 2012 W Newton Suter argues that what is important in a changing education landscape is the ability to think clearly about research methods reason through complex problems and evaluate published research He explains how to evaluate data and establish its relevance VET Boost: Towards a Theory of Professional Competencies ,2009-01-01 The themes of the different papers in this book are related to five major areas of research First the book presents the work on a large scale assessment in vocational and occupational education and training Reason was the work of Frank Achtenhagen and his colleagues on the preparation of a VET PISA which started in 2004 which has now become more and more a concrete program The contributions to this part of the book contain a project description and profound presentations and discussions of measurement and evaluation problems It reflects also the work of Achtenhagen with respect to item response theory measurement and testing The second part of this book presents a unique endeavour of promoting VET research The Swiss Federal Office for Professional Education and Technology OPET initiated a program of Leading Houses of VET which are dedicated to different important research topics This program might serve as example for comparable approaches in other countries The third part highlights central issues of research on learning processes curriculum theory and the use of technology Here the work of Achtenhagen on competence profile modelling competence measurement and instructional and curriculum designing is touched The fourth part stresses social and emotional learning as important aspects of VET learning The fifth part considers the political and institutional dimensions of VET research which have to be taken into account when an international large scale assessment of VET shall be getting

started Achtenhagen's work on learning at work leaning in economics and learning under the conditions of institutional modelling are discussed The whole book is a collection of central issues around a field that is not yet taken enough into consideration in educational research but pushed and supported by Frank Achtenhagen VET research He belongs to the founding fathers of it and this is why precisely the book reflects new trends and new concepts with respect to the question What can we educational psychologists and educational researchers learn from a rich and central research field *Shaw* Fred D.
