

## ACT English Practice Test

### Animals and Plants

1      Pollination is the process by which plants reproduce. Pollinators like bees, hummingbirds, or wasps carry pollen from one flower to another. The flowers have nectar that attracts the pollinators. The pollinators are then covered in pollen when they land on the flower. When they fly to another flower, the first flower's pollen drops off the pollinator and onto the next flower. If the two plants are the same kind, then the plant can reproduce and make seeds.

2      Finally, the seeds are then dispersed by wind or animals. They are buried by soil and fed with rain and sunlight. Eventually, they grow into adult plants and the process begins again. Reproduction keeps the cycle of life moving.

3      Reproduction is a fascinating topic. Have you ever wondered how living things make copies of themselves. Plants and animals reproduce in very different ways. Even around animals, there are different ways to reproduce. Reptiles like snakes and turtles lay eggs that hatch. Many fish and insects also lay eggs. Mammals, like giraffes, cats, and bears, incubate their babies inside their bodies until they are born. Plants have an entirely unique way of reproducing.

1. What would be the BEST title for the passage?
