Titration - is the measurement of the volume of a standard solution required to completely react with a measured volume or mass of substance being analyzed (also referred to as analyte)

Standard solution - is a solution containing a known concentration of solute.

Standardization - the concentration of a solution is determined by using it to titrate a carefully measured quantity of a primary standard.

Primary standard - is a highly purified compound that serves as a reference material in all volumetric and mass titrimetric methods. (high purity, stable toward air/dried, absence of hydrated waters, cost, soluble in solvent, large molar mass)
