Seidel, Deborah P. Henderson, 1991      **The Impact of Specialized Training for Emergency Medical Services Specialists on the Accuracy of Triage in Emergency Departments** Sultan Ibrahim Alkathiri, Abdullrahman Awad Alotaibi, Mohammed Yahya Alshehri, Mohammed Mansour Alotibi, In medical emergencies time is of the essence This requires each and every member involved in healthcare especially emergency departments ED to have a kind of precision which goes without question to make decisions rapidly and with the highest level of skill Similarly on such a sea of pain and noise where patients are nameless and faceless it is essential to prioritize patients and opt to help those who might be saved by some simple procedure that takes little time at all This skill called triage is at the heart of emergency care and makes sure that patients receive appropriate treatment when they need it most Triage has long been seen as a province of emergency rooms and the battlefield but how well it is done can depend much on skills and expertise In emergency medical services EMS today the field has shifted with specialized training programs playing an increasingly important role Training programmes seek to deepen the knowledge base and refine the judgment systems of paramedics EMTs and other EMS specialists The eventual result is that care given to patients once they step through those hospital doors becomes closely dependent on these programs This book entitled *The Impact of Specialized Training for Emergency Medical Services Specialists on Triage in Emergencies* will study how EMS completion rates affect triage decision making Key to this study is the relationship between specialized education and hands-on training versus patient results accuracy and effectiveness of triage under crisis conditions in an emergency environment The book collates insights from research findings expert opinions case studies and interviews with people in the field to explain the critical role that EMS specialists especially those who have received advanced specialized training play in shaping initial ED assessments We study how this specialized training changes decision making processes the handling of patients who are critically ill or injured and how it can eliminate mistakes that arise when people makes judgments about patients trapped in battle conditions such as in the field This work seeks to highlight not just the profound impact of specialized training but also underscores the need to continually update and improve EMS training programmes in order to stay ahead of what are now rapidly growing challenges In this way we hope to provide valuable guidance for health professionals administrators policy makers and educators aiming to enhance patient care emergency services and the broader relationship between training and triage We aim by discussing both the theoretical frameworks and practices in specialized EMS training to highlight the unarguable links which exist between better emergency care systems and an efficiently trained EMS personnel Such an issue looms vastly important as swift and timely decision making in triage too often hinges on the question of life or death Finally as you read these chapters we invite you to tread into a substantial topic

how it is that advanced specialized training can significantly affect the outcome of emergency medical care and what new advances may be within reach for the whole triage process globally *Emergency Medical Services* ,2002 Medical Bulletin of the European Command ,1983 **Current Surgical Therapy - E-Book** John L.
