Being at Genetic Risk Kelly Pender, 2018-10-04 Rhetorics of choice have dominated the biosocial discourses surrounding BRCA risk for decades, telling women at genetic risk for breast and ovarian cancers that they are free to choose how and whether to deal with their risk. Critics argue that women at genetic risk are in fact not free to choose but rather are forced to make particular choices. In *Being at Genetic Risk*, Kelly Pender argues for a change in the conversation around genetic risk that focuses less on choice and more on care. *Being at Genetic Risk* offers a new set of conceptual starting points for understanding what is at stake with a BRCA diagnosis and what the focus on choice obstructs from view. Through a praxiographic reading of the medical practices associated with BRCA risk, Pender's analysis shows that genetic risk is not just something BRCA women know but also something that they do. It is through this doing that genetic cancer risk

becomes a reality in their lives one that we can explain but not one that we can explain away Well researched and thoughtfully argued *Being at Genetic Risk* will be welcomed by scholars of rhetoric and communication particularly those who work in the rhetoric of science technology and medicine as well as scholars in allied fields who study the social ethical and political implications of genetic medicine Pender's insight will also be of interest to organizations that advocate for those at genetic risk of breast and ovarian cancers Clinical Breast Imaging: The Essentials Gilda Cardenosa, 2014-08-19 Maximize your interpretative skills in breast imaging with this clinically oriented resource Ideal for residents in radiology this image rich text fosters the development of skills necessary to facilitate and maximize interpretive skills in all aspects of breast imaging from mammographyultrasound and MRI to imaging guided procedures This title will also help readers learn how to incorporate clinical and imaging findings to pathology during diagnosis and patient management *Breast Imaging* Anders Tingberg, Kristina Lång, Pontus Timberg, 2016-06-16 This book constitutes the refereed proceedings of the 13th International Workshop on Breast Imaging IWDM 2016 held in Malmö Sweden in June 2016 The 35 revised full papers and 50 revised poster papers presented together with 6 invited talks were carefully reviewed and selected from 89 submissions The papers are organized in topical sections on screening CAD mammography tomosynthesis and breast CT novel technology density assessment and tissue analysis dose and classification image processing CAD breast density and new technology contrast enhanced imaging phase contrast breast imaging simulations and virtual clinical trials Diagnosis and Management of Breast Tumors Michael Ola Idowu, Priti Anilkumar Shah, Mary Helen Hackney, Margaret Mary Grimes, Charles Edward Geyer, Jr., Douglas William Arthur, Harry Douglas Bear, 2017-09-25 This text is designed to present a practical and concise handbook on the diagnosis and management of breast diseases for quick reference by trainees and practitioners It emphasizes the approach to diagnosis and management of breast tumors written from the perspectives of each member of the multidisciplinary management team pathologist radiologist medical oncologist surgical oncologist and radiation oncologist The text is divided into two sections The first section is written by each subspecialty with focus on the overview and management of breast tumors current controversies position statement when necessary and quality assurance The radiology overview addresses questions such as when to perform breast imaging the difference between screening and diagnostic mammograms when to perform Magnetic Resonance Imaging MRI and ultrasound the meaning of radiological descriptors and lastly the cost effectiveness and quality assurance of radiologic assessment of breast tumors The pathology overview addresses approaches to evaluation of breast biopsies and excision for calcifications densities distortion asymmetry and masses pitfalls to histologic interpretations the utility of immunohistochemical stains quality assurance and cost effectiveness and current controversies and position statements Surgical medical and radiation oncology overviews address when to treat and when to refrain current treatment options or modalities and the factors informing choice utility of genomics or molecular diagnostics in management quality assurance controversies and position statements The second
