a small hardware device that joins multiple computers together within one local area network LAN A router is a more sophisticated network device that joins multiple wired or wireless networks together The only book devoted to forensic analysis of routers and switches focusing on the operating system that runs the vast majority of network devices in the enterprise and on the Internet Outlines the fundamental differences between router forensics and traditional forensics a critical distinction for responders in an investigation targeting network activity Details where network forensics fits within the entire process of an investigation end to end from incident response and data collection to preparing a report and legal testimony   *SSL Remote Access VPNs (Network Security)* Qiang Huang,Jazib Frahim,2008-06-10 SSL Remote Access VPNs An introduction to designing and configuring SSL virtual private networks Jazib Frahim CCIE No 5459 Qiang Huang CCIE No 4937 Cisco SSL VPN solutions formerly known as Cisco WebVPN solutions give you a flexible and secure way to extend networking resources to virtually any remote user with access to the Internet and a web browser Remote access based on SSL VPN delivers secure access to network resources by establishing an encrypted tunnel across the Internet using a broadband cable or DSL or ISP dialup connection SSL Remote Access VPNs provides you with a basic working knowledge of SSL virtual private networks on Cisco SSL VPN capable devices Design guidance is provided to assist you in implementing SSL VPN in existing network infrastructures This includes examining existing hardware and software to determine whether they are SSL VPN capable providing design recommendations and guiding you on setting up the Cisco SSL VPN devices Common deployment scenarios are covered to assist you in deploying an SSL VPN in your network SSL Remote Access VPNs gives you everything you need to know to understand design install configure and troubleshoot all the components that make up an effective secure SSL VPN solution Jazib Frahim CCIE No 5459 is currently working as a technical leader in the Worldwide Security Services Practice of the Cisco Advanced Services for Network Security He is responsible for guiding customers in the design and implementation of their networks with a focus on network security He holds two CCIEs one in routing and switching and the other in security Qiang Huang CCIE No 4937 is a product manager in the Cisco Campus Switch System Technology Group focusing on driving the security and intelligent services roadmap for market leading modular Ethernet switching platforms During his time at Cisco Qiang has played an important role in a number of technology groups including the Cisco TAC security and VPN team where he was responsible for trouble shooting complicated customer deployments in security and VPN solutions Qiang has extensive knowledge of security and VPN technologies and experience in real life customer deployments Qiang holds CCIE certifications in routing and switching security and ISP Dial Understand remote access VPN technologies such as Point to Point Tunneling Protocol PPTP Internet Protocol Security IPsec Layer 2 Forwarding L2F Layer 2 Tunneling L2TP over IPsec and SSL VPN Learn about the building blocks of SSL VPN including cryptographic algorithms and SSL and Transport Layer Security TLS Evaluate common design best practices for planning and designing an SSL VPN solution Gain insight into SSL VPN functionality on Cisco Adaptive Security Appliance ASA and
