Gilbert, 2006-03-30 Visualization in Science Education draws on the insights from cognitive psychology science and education by experts from Australia Israel Slovenia UK and USA It unites these with the practice of science education particularly the ever increasing use of computer managed modelling packages especially in chemistry The first section explores the significance and intellectual standing of visualization The second section shows how the skills of visualization have been developed practically in science education This is followed by accounts of how the educational value of visualization has been integrated into university courses in physics genomics and geology The fourth section documents experimental work on the classroom assessment of visualization An endpiece summarises some of the research and development needed if the contribution of this set of universal skills is to be fully exploited at all levels and in all science subjects Perspectives on Scientific Argumentation Myint Swe Khine, 2011-09-30 Argumentation arriving at conclusions on a topic through a process of logical reasoning that includes debate and persuasion has in recent years emerged as a central topic of discussion among science educators and researchers There is now a firm and general belief that fostering argumentation in learning activities can develop students critical thinking and reasoning skills and that dialogic and collaborative inquiries are key precursors to an engagement in scientific argumentation It is also reckoned that argumentation helps students assimilate knowledge and generate complex meaning The consensus among educators is that involving students in scientific argumentation must play a critical role in the education process itself Recent analysis of research trends in science education indicates that argumentation is now the most prevalent research topic in the literature This book attempts to consolidate contemporary

thinking and research on the role of scientific argumentation in education Perspectives on Scientific Argumentation brings together prominent scholars in the field to share the sum of their knowledge about the place of scientific argumentation in teaching and learning Chapters explore scientific argumentation as a means of addressing and solving problems in conceptual change reasoning knowledge building and the promotion of scientific literacy Others interrogate topics such as the importance of language discursive practice social interactions and culture in the classroom The material in this book which features intervention studies discourse analyses classroom based experiments anthropological observations and design based research will inform theoretical frameworks and changing pedagogical practices as well as encourage new avenues of research
