Vertebrate Development Francisco Pelegri, Michael Danilchik, Ann Sutherland, 2016-12-13 This book provides a comprehensive overview of topics describing the earliest steps of fertilization from egg activation and fertilization to the activation of the zygotic genome in various studied vertebrate model systems The contribution of maternal and paternal factors and their role in the early embryo as parental DNA becomes modified and embryonic genes become activated is fundamental to the initiation of embryogenesis in all animal systems It can be argued that this is a unique developmental period when information from the parents is compressed to direct the development of the body plan of the entire organism a process of astounding simplicity elegance and beauty In addition to their fundamental scientific interest many frontiers of biomedicine such as reproductive biology stem cells and reprogramming and the understanding of intergenerational diseases depend on advances in our knowledge of these early processes Vertebrate Development Maternal to Zygotic Control brings together chapters from experts in various disciplines describing the latest advances related to this important developmental transition Each chapter is a synthesis of knowledge relevant to all vertebrates with details on specific systems as well as comparisons between the various studied vertebrate models The editorial expertise encompasses the fields of major vertebrate model systems mammalian amphibian and teleost ensuring a balanced approach to various topics This unique book with its combination of in depth and up to date basic research inter species comprehensiveness and emphasis on the very early stages of animal development is essential for research scientists studying vertebrate development as well as being a valuable resource for college educators teaching advanced courses in developmental biology
