

Copy! Which cells are capable of making the copies in your body. Come from? Write down the question.

Chapter 10 Reproduction

Your school probably has at least one copy machine. When a teacher has a quiz or a letter that she wants each student to have, she runs the paper through the copier. The copier reproduces the paper, making exact copies so each student can have one. Your cells undergo a process that makes exact copies of themselves too, but of course, they don't use a copy machine! You grew because your cells multiply. How did you end up with billions of cells when you started as the union of only two cells? Cells have fascinating ways of making copies of themselves. Take a trip into the world of the cell to learn how organisms can reproduce and grow—the processes are amazing!

Key Questions

1. How do cells make exact copies of themselves?
2. How do organisms reproduce to make similar organisms?

Women's Under-Representation in the Engineering and Computing Professions: Fresh Perspectives on a Complex Problem Kathleen Buse, Catherine Hill, Romila Singh, 2018-06-21 Understanding the many complexities that define gender inequality has been described by researchers as a grand challenge. Novel insights, innovation, a broader community to conduct research, and to ascertain effective interventions are essential in the challenge to create organizations that are gender equal. As such, this Research Topic in *Frontiers in Psychology* addresses the underrepresentation of women in engineering and computing as a complex but solvable problem. This Research Topic seeks to inform the global community about advances in understanding the underrepresentation of women in engineering and computing, with a focus on what enables change. Further, this Topic will promote fresh perspectives, innovative methodologies, and mixed method approaches important to accelerating the pace of change.

Language and Literacy in Inquiry-Based Science Classrooms, Grades 3-8 Zhihui Fang, Linda L. Lamme, Rose M. Pringle, 2010-09-07 This practical guide helps teachers effectively integrate reading strategy instruction, language analysis, and trade books into inquiry-based science classrooms to promote content learning. Inspired by a middle school reading/science integration project, this book explores the science reading connection and the function of inquiry in science education. The challenges associated with science reading and classroom-based strategies for learning language and science. The role of literature in the science curriculum. How to develop a home science reading program.

The Nobel Collection, Volume 1 Robert Knight, Idan Segev, 2023-01-30 Humans are highly curious; we are eager to understand ourselves and the world around us, and we love the feeling of discovering something new. Some people choose to become scientists and devote their lives to exploring and understanding the laws of nature and life itself. A scientific understanding of the natural world is critical for developing new technologies and materials and for curing devastating diseases. Every scientist makes discoveries that contribute to the constantly expanding body of human knowledge. Occasionally, scientists even discover entirely new phenomena that transform the way we understand the universe. Think of Albert Einstein's famous theories, for example, or the pioneering work of Marie Skłodowska-Curie, which led to the discovery of new elements and advanced the treatment of certain cancers. Indeed, her discovery of radioactivity paved the way for both the diagnosis via X-rays and treatment of cancer via radiation therapy. Groundbreaking discoveries such as these usually result from a combination of knowledge, dedication, brilliance, and good luck. Each year we celebrate these transformative discoveries by awarding Nobel Prizes in chemistry, physics, economics, and physiology or medicine. These prizes represent our highest level of recognition of the scientific accomplishments that have changed the world for the better. Now, in 2021, exactly 120 years after the first Nobel Prize was awarded, we launch this special Nobel Collection in *Frontiers for Young Minds*. This Collection brings you articles by Nobel laureates written specifically for young minds. In this first of its kind collection, Nobel Prize winners explain their amazing discoveries and describe how they accomplished them. These Nobel laureates share their

thoughts on research and what it means to be a scientist and they even provide advice for becoming a successful researcher and living a happy meaningful life Like all Frontiers for Young Minds articles these articles have been reviewed and approved by kids like you Did you know that Nobel Prize winners and Young Minds readers have several important traits in common The first is curiosity The scientific journeys of Nobel laureates are often fueled by an intense child like curiosity the same curiosity that motivates you to read these articles Many Nobel laureates also manage to stay as open minded as Young Minds readers they keep their opinions flexible and can be persuaded to change their minds when new data challenges their existing beliefs In the words of 2014 Nobel laureate May Britt Moser I believe that it is important to maintain your curiosity about things both now and as an adult and find something that you have a passion for that makes you enthusiastic and feel alive For myself I can say that I am very curious about things and that it is extremely important for me to understand things It gives me so much pleasure when I understand something that I did not understand before this is my leading star We hope that this unique new Collection will be your leading star that it will help you to further develop your own curiosity and openness and that it inspires you reach for new discoveries in your own life Science and Mathematics Books for
