Cable,2020-01-21 Considers the Native American abandonment of the South Carolina coast A prevailing enigma in American archaeology is why vast swaths of land in the Southeast and Southwest were abandoned between AD 1200 and 1500 The most well known abandonments occurred in the Four Corners and Mimbres areas of the Southwest and the central

Mississippi valley in the twelfth and thirteenth centuries and in southern Arizona and the Ohio Valley during the fifteenth century In Megadrought in the Carolinas The Archaeology of Mississippian Collapse Abandonment and Coalescence John S Cable demonstrates through the application of innovative ceramic analysis that yet another fifteenth century abandonment event took place across an area of some 34 5 million acres centered on the South Carolina coast Most would agree that these sweeping changes were at least in part the consequence of prolonged droughts associated with a period of global warming known as the Medieval Climatic Anomaly Cable strengthens this inference by showing that these events correspond exactly with the timing of two different geographic patterns of megadrought as defined by modern climate models Cable extends his study by testing the proposition that the former residents of the coastal zone migrated to surrounding interior regions where the effects of drought were less severe Abundant support for this expectation is found in the archaeology of these regions including evidence of accelerated population growth crowding and increased regional hostilities Another important implication of immigration is the eventual coalescence of ethnic and or culturally different social groups and the ultimate transformation of societies into new cultural syntheses Evidence for this process is not yet well documented in the Southeast but Cable draws on his familiarity with the drought related Puebloan intrusions into the Hohokam Core Area of southern Arizona during the thirteenth and fourteenth centuries to suggest strategies for examining coalescence in the Southeast The narrative concludes by addressing the broad implications of late prehistoric societal collapse for today s human propelled global warming era that portends similar but much more long lasting consequences

Saving the World Julia Alvarez,2007-04-27 Latina novelist Alma Huebner is suffering from writer s block and is years past the completion date for yet another of her bestselling family sagas Her husband Richard works for a humanitarian organization dedicated to the health and prosperity of developing countries and wants her help on an extended AIDS

assignment in the Dominican Republic But Alma begs off joining him the publisher is breathing down her neck She promises to work hard and follow him a bit later The truth is that Alma is seriously sidetracked by a story she has stumbled across It's the story of a much earlier medical do-gooder Spaniard Francisco Xavier Balmis who in 1803 undertook to vaccinate the populations of Spain's American colonies against smallpox To do this he required live carriers of the vaccine Of greater interest to Alma is Isabel Sendales y Gomez director of La Casa de Expositos who was asked to select twenty-two orphan boys to be the vaccine carriers She agreed with the stipulation that she would accompany the boys on the proposed two-year voyage Her strength and courage inspire Alma who finds herself becoming obsessed with the details of Isabel's adventures This resplendent novel within a novel spins the disparate tales of two remarkable women both of whom are swept along by machismo In depicting their confrontation of the great scourges of their respective eras Alvarez exposes the conflict between altruism and ambition

Starfish John M. Lawrence, 2013-03-15 The most complete illustrated scientific review of starfish ever published Among the most fascinating animals in the world's oceans are the more than 2,000 species of starfish Called Asteroids by scientists who study them after their taxonomic name Asteroidea or sea stars in some parts of the world starfish are easily recognized because of their star-like form Starfish is a comprehensive volume devoted to the integrative and comparative biology and ecology of starfish Written by the world's leading experts on starfish the integrative section covers topics such as reproduction developmental biology and ecology larval ecology and the ecological role of starfish as a group The comparative section considers the biology and ecology of important species such as *Acanthaster planci* *Heliaster helianthoides* *Asterias amurensis* and *Pisaster ochraceus* Replete with detailed scientifically accurate illustrations and the latest research findings Starfish examines the important role of these invertebrates in the marine environment a topic of great interest because of their impact on the food web As major predators that are able to evert their stomach and wrap it around their prey starfish can have a significant impact on commercial fisheries Starfish are of interest not only to echinoderm specialists but also to marine biologists and invertebrate zoologists in general and increasingly to the medical community A starfish's ability to regenerate body parts is almost unequalled in the animal world making them ideal models for basic science studies on the topic Contributors Charles D.
