

Start using different body positions

Changing body position is one of the simplest ways to change your weightlifting style. It is. While most people believe performing a lift from the air will automatically lead to a lift, weightlifters know better.

A study by the U.S. Olympic Committee found that lifters who used a variety of different body positions during a lift were able to lift more weight than those who used only one position.

| Weightlifters | From the Air | From the Ground | From the Bench |
|---------------|--------------|-----------------|----------------|
| Weightlifters | 100 | 100 | 100 |

There are three main body positions that lifters use to lift a weight: from the air, from the ground, and from the bench.

From the air, lifters start with the bar on the floor and lift it up to their chest. From the ground, lifters start with the bar on the floor and lift it up to their chest.

From the bench, lifters start with the bar on the bench and lift it up to their chest. Lifters who use a variety of different body positions during a lift are able to lift more weight than those who use only one position.
