M. Johnson,T. L. Killeen,1995-01-09 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 87 This volume provides a review of progress made in recent years in experimental and theoretical investigation of the upper mesosphere and lower thermosphere and coupling between these regions and the ionosphere Detailed study of the mesosphere lower thermosphere ionosphere MLTI region has historically been difficult because of its relative inaccessibility to direct measurement techniques and the complex and highly coupled processes which occur there Although we have still not successfully unraveled all these complex interactions we have made significant recent progress toward a fuller understanding of the basic state of the MLTI and of the dominant wave and coupling processes This monograph includes a set of tutorial papers which review our current understanding of aspects of the MLTI These tutorials are interspersed with a selection of papers describing research progress on various topics of current interest in this region The book should therefore be useful both to the newcomer as an introduction to this field of research and to the more experienced researcher providing an overview of research in progress as well as a convenient reference collection of papers describing our current understanding *Coupling Processes in the Lower and Middle Atmosphere* E.V. Thrane,Tom A. Blix,David C. Fritts,2012-12-06 The NATO Advanced Research Workshop on Coupling Processes in the Lower and Middle atmosphere held in Loen Norway in May 1992 was in the estimation of apparently all participants an enormous success The 18 invited speakers included many of the leaders in the field and resulted in the attendance of a large number of contributing speakers and observers The subject of the workshop was itself very timely given the increasing awareness within the international community of the sensitivity of the atmosphere to coupling between adjacent layers different latitudes and various scales of motion It was also very beneficial to bring together researchers with different approaches to the same or similar problems For example experimentalists benefitted from the inputs of modelers and theoreticians concerning the needs of current models and the most pressing problems and unknowns Likewise theoreticians were challenged to apply themselves to realistic problems and saw their theories tested against geophysical

data These discussions led to meaningful exchanges of ideas and challenges to or displacement of conventional wisdom in some areas Indeed possibly the greatest benefit of the workshop was the exposure of many participants to other areas of research or approaches to problems relevant to their own work Workshop topics were confined to dynamical coupling processes in order to examine progress in a relatively focussed area Nevertheless the results presented spanned spatial scales from molecular to global and temporal scales from seconds to decades
