

# Mining meaning from Wikipedia

OLENA MEDELYAN, DAVID MILNE, CATHERINE LEGG and IAN H. WITTEN  
University of Waikato, New Zealand

---

Wikipedia is a goldmine of information; not just for its many readers, but also for the growing community of researchers who recognise it as a resource of exceptional scale and utility. It represents a vast investment of manual effort and judgment: a huge, constantly evolving tapestry of concepts and relations that is being applied to a host of tasks.

This article provides a comprehensive description of this work. It focuses on research that extracts and makes use of the concepts, relations, facts and descriptions found in Wikipedia, and organizes the work into four broad categories: applying Wikipedia to natural language processing, using it to facilitate information retrieval and information extraction, and as a resource for ontology building. The article addresses how Wikipedia is being used as is, how it is being improved and adapted, and how it is being combined with other structures to create entirely new resources. We identify the research groups and individuals involved, and how their work has developed in the last few years. We provide a comprehensive list of the open-source software they have produced.

---

## 1. INTRODUCTION

Wikipedia requires little introduction or explanation. As everyone knows, it was launched in 2001 with the goal of building free encyclopedias in all languages. Today it is easily the largest and most widely-used encyclopedia in existence. Wikipedia has become something of a phenomenon among computer scientists as well as the general public. It represents a vast investment of freely-given manual effort and judgment, and the last few years have seen a multitude of papers that apply it to a host of different problems. This paper provides the first comprehensive summary of this research (up to mid-2008), which we collect under the deliberately vague umbrella of *mining meaning from Wikipedia*. By *meaning*, we encompass everything from concepts, topics, and descriptions to facts, semantic relations, and ways of organizing information. *Mining* involves both gathering meaning into machine-readable structures (such as ontologies), and using it in areas like information retrieval and natural language processing.

Traditional approaches to mining meaning fall into two broad camps. On one side are carefully hand-crafted resources, such as thesauri and ontologies. These resources are generally of high quality, but by necessity are restricted in size and coverage. They rely on the input of experts, who cannot hope to keep abreast of the incalculable tide of new discoveries and topics that arise constantly. Even the most extensive manually created resource—the Cyc ontology, whose hundreds of contributors have toiled for 20 years—has limited size and patchy coverage [Sowa 2004]. The other extreme is to sacrifice quality for quantity and obtain knowledge by performing large-scale analysis of unstructured text. However, human language is rife with inconsistency, and our intuitive
