Technology-Infused Education in the Post-Pandemic Era Tomei, Lawrence A., Carbonara, David D., 2024-08-05 In the aftermath of the 2020-2022 pandemic educators find themselves grappling with the decision to revert to traditional instructional methods or embrace the transformative power of 21st century technologies. The swift integration of virtual classrooms, videoconferencing, and social media during the pandemic has left teachers navigating uncharted territory. Many who once vehemently resisted technology now stand on the precipice of a digital revolution in education. This dichotomy poses a pressing problem: a dearth of documented research and guidance for educators seeking to measure the true value of these technologies in the post-pandemic era. Exploring Technology-Infused Education in the Post-Pandemic Era offers guidance and solutions to the challenges faced by educators. As teachers stand on the brink of a pivotal decision, the research community lags behind in providing the necessary insights to inform their choices. The questions loom large: What technologies emerged during the pandemic and have they proven effective in the classroom? Can these innovations seamlessly coexist with traditional instructional methods? The void in documented research leaves educators in a quandary, lacking the evidence needed to make informed decisions about the integration of technology into their teaching practices. This critical gap impedes progress and hinders the unleashing of the full potential of 21st century educational tools.

Motivation and Learning Strategies for College Success Myron H. Dembo, Helena Seli, 2004-03-05 A motivation and learning strategies textbook that bridges research and practice. Motivation and Learning Strategies for College Success, Second Edition, teaches college students how to become more self-directed learners. Study skills are treated as a serious academic course. Students learn about human motivation and learning as they improve their study skills. The text does not offer recipes for success or lists of quick tips. Rather, the focus is on relevant information and features designed to help students identify the components of academic learning that contribute to high achievement, to master and practice effective learning and study strategies, and then to complete self-management studies whereby they are taught a process for improving their academic behavior. A framework organized around six components related to academic success: motivation, methods of learning, time management, control of the physical and social environment, and performance, makes it easy for students to understand what they need to do to become more successful in the classroom. The text combines an overview of theory and research to help learners understand what factors determine or influence successful learning and why they are asked to use different study and learning strategies in the text, with field-tested exercises, follow-up activities, and appendices that assist students in observing and changing their own behavior. A separate Instructor's Manual provides helpful information for teaching the material; includes additional exercises and experiences for students; provides both objective and essay test questions; and includes information on how students can maintain a portfolio to demonstrate their acquisition of learning and study skills and guidelines for helping students complete a self-management study of their own behavior.
