

## Fuel Pump Control Circuit

### DESCRIPTION

When the engine is cranked, a current flows from terminal ST2 of the ignition switch into the starter relay (Marking: ST) coil and a current also flows into terminal STA of the ECM (STA signal).

When the STA and NE signals are received by the ECM, Tr (power transistor) is switched on, allowing a current to flow into the circuit opening relay (Marking: C/OPN) coil, the circuit opening relay switches on, power is supplied to the fuel pump and the fuel pump operates.

While the NE signal is being generated (engine running), the ECM keeps Tr ON, therefore keeping the circuit opening relay ON, so that the fuel pump continues to operate.

**Remodeling** Nicoletta Gagliano, 2019-11-11 The extracellular matrix ECM is where cells live It is composed of collagen and elastic fibers glycosaminoglycans and proteoglycans and several glycoproteins In most tissues fibril forming collagen type I is the major constituent of ECM The function of the ECM goes beyond providing mechanical support to cells and tissues As cells are embedded into the ECM and interact with its components through their surface receptors cell ECM interaction plays a key role in influencing different cell activities such as cell proliferation and migration The ECM also sequesters and releases growth factors affecting important cellular pathways Overall the ECM strongly influences and affects cell behavior and tissue homeostasis ECM is a highly dynamic structural network that continuously undergoes controlled remodeling mediated by matrix degrading enzymes the matrix metalloproteinases MMPs under normal conditions Quantitative and qualitative deregulation of ECM remodeling and especially of collagen turnover is responsible for the alteration of ECM composition and structure associated with the development and progression of several pathological conditions such as organ fibrosis determined by the abnormal accumulation of ECM components and tumor invasion The understanding of the diverse biological roles and properties of the ECM components is pivotal to the development of new therapeutic tools for disease treatment      **Proceedings of the Mineral Waste Utilization Symposium** , 1974      Extracellular Matrix and Egg Coats
