## 1 About this study aid...

This document has been designed to make revision and self-marking easy for students studying AHS chemistry in Scotland.

The information in this publication has been reproduced to support SQA qualifications only on a non-commercial basis and can only be shared on that condition.

## 2 How to use...

The following two pages contain topics which cross-reference the course topics with SQA question numbers for the years 2014-18.

The first table is for multiple-choice questions, the second contains Section 2 questions. Each question number is hyperlinked to the SQA question and clicking it will take you there. The questions pages have further hyperlinks taking you back to the topic grid (top) or to the SQA marking instructions (bottom). Of course, you can always just treat it as a collection of question papers with marking instructions. This will be useful for most of course-based revision.

The SQA papers are included in this document to avoid the problems of broken hyperlinks to web pages that have disappeared. The document is self-contained and does not require an internet connection and so is usable anywhere. Mr Simons, High of Lewis Academy

Flores, Tim A. Moore, 2024-01-24 Coal and Coalbed Gas Future Directions and Opportunities Second Edition introduces the latest in coal geology research and the engineering of gas extraction Importantly the second edition examines how over the last 10 years research has both changed focus and where it is conducted This shift essentially depicts a tale of two worlds one half Western Europe North America moving away from coal and coalbed gas research and production towards cleaner energy resources and the other half Asia Pacific region Eastern Europe South America increasing both research and usage of coal These changes are marked by a precipitous fall in coalbed gas production in North America however at the same time there has been a significant rise in coal and coalbed gas production in Australia China and India The driver for higher production and its associated research is a quest for affordable energy and economic security that a large resource base brings to any country like Australia's first large scale coalbed gas to liquid natural gas projects supplying the demand for cleaner burning LNG to the Asian Pacific region Since the last edition of this book global climate change policies have more forcibly emphasized the impact of methane from coal mines and placed these emissions equal to or even more harmful than CO<sub>2</sub> emissions from fossil fuels in general Governmental policies have prioritized capture use and storage of CO<sub>2</sub> burning coal in new highly efficient low emission power plants and gas pre drainage of coal mines The Organization for Economic Cooperation and Development OECD countries and China are also introducing new research into alternative non fuel uses for coal such as carbon fibers nanocarbons graphene soil amendments and as an unconventional ore for critical elements New to this edition Each chapter is substantially changed from the 1st edition including expanded and new literature citations and reviews important new data and information new features and materials as well as re organized and re designed themes Importantly three new chapters cover global coal endowment and gas potential groundwater systems related to coalbed gas production and biogenic gas generation as well as the changing landscape of coal and coalbed gas influenced by global climate change and net zero carbon greenhouse gas emissions FOREWORD When I reviewed the first edition of this book my initial thought was Do we need another book on coal geology and then I read it and realised Yes we need this book and my students downloaded copies as soon as it was available So now we come to 2023 and a lot has happened in the past decade For a different reason we might ask if we still need this book or even coal geoscientists and engineers as the world aims for rapid decarbonisation of the energy sector and a reduction of coal as a feedstock for industrial resources like steel manufacture Nuclear Science Abstracts ,1966 **NASA Technical Memorandum** ,1994 Applied Mechanics Reviews ,1965 *Journal of the Society of Arts* Royal Society of Arts (Great Britain),1877 *Stantec's Water Treatment* John C. Numerical and Experimental Studies on Small/Micro Nuclear Reactors Yugao Ma, Shanfang Huang, Shichang Liu, Peng Zhang, Jiankai Yu, 2024-04-01 Future space missions and deep sea explorations will require small micro nuclear reactors kWe MWe for power generation Compared with conventional energy systems such as storage batteries and fossil energy nuclear reactors are featured higher energy intensity higher reliability and longer lifetime According to the coolant the candidate small micro nuclear reactors include the heat pipe cooled reactor liquid metal cooled reactor and gas cooled reactor most of which are still in the conceptual design stage with numerical studies and experimental research These emerging reactors have an entirely different core structure and working principle from the existing light water reactors which has led to an increasing need for updated simulation methods and experimental studies
