Technical Books in Print ,1974 Diesel Engine Repair Manual Ken Freund,John Harold Haynes,1991 Chest pain can be terrifying Many people panic or hope that if they ignore it it will go away But angina must be taken seriously and in addition to taking medical advice it s important to find out what you can do about it and what you can do to help yourself reduce the risk of a heart attack This book answers key questions for anyone worried about angina What is it and why is it happening Does it mean I m going to have a heart attack What should I do when I have chest pain How do I tell if it s serious Living with Angina is also packed with useful advice about what you can do to deal with high cholesterol or high blood pressure develop a sensible exercise program and make crucial lifestyle changes that will help you live life to the full BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved *British Coastal Forces* Norman Friedman,2023-04-30 The Royal Navy invented the fast motor torpedo boat during the First World War and used it and other small coastal craft to great effect during the Second This book tells the dramatic story of British coastal forces both offensive and defensive in both World Wars and beyond In the Second World War British coastal forces fought a desperate battle to control the narrow seas particularly the Channel and the North Sea and took the war to the coasts of German occupied Europe fighting where larger warships could not be risked They also made a significant contribution to victory in the Mediterranean but it was primarily warfare in home waters that shaped wartime British Coastal Forces and left lessons for postwar development In this book Norman Friedman uniquely connects the technical story of the coastal craft and their weapons and other innovations with the way they fought In both world wars much of the technology was at the edge of what was feasible at the time Boats incorporated considerable British innovation and also benefited from important US

contributions particularly in supplying high powered engines during World War II In contrast with larger warships British coastal forces craft were essentially shaped by a few builders and their part in the story is given full credit They also built a large number of broadly similar craft for air sea rescue and for completeness these are described in an appendix This fascinating dramatic story is also relevant to modern naval thinkers concerned with gaining or denying access to hostile shores The technology has changed but the underlying realities have not This book includes an extensive account of how coastal forces supported the biggest European example of seizing a defended shore the Normandy invasion That was by far the largest single British coastal forces operation demanding a wide range of innovations to make it possible Like other books in this series this one is based very heavily on contemporary official material much of which has not been used previously like the extensive reports of US naval observers who were allowed wide access to the Royal Navy as early as 1940 Combined with published memoirs these sources offer a much more complete picture than has previously appeared of how Coastal Forces fought and of the way in which various pressures both operational and industrial shaped them
