**Principles of Health Interoperability HL7 and SNOMED** Tim Benson, 2010-05-06 Joined up healthcare makes information available when and where it is needed to improve safety, efficiency and effectiveness. Politicians may take interoperability between healthcare computer systems for granted, but it is non-trivial. Healthcare integration projects are notoriously under-estimated and come in over budget and over time. Joined up healthcare depends on standards. The two leading standards are the SNOMED CT which is a clinical terminology semantics and HL7 Version 3 which is a specialised healthcare interoperability language syntax. Both are new, complex and fit for purpose. Tim Benson believes there is an unmet need for a book on Healthcare Integration. Some health informatics textbooks include chapters on HL7 and or SNOMED but these are usually quite short and cannot provide even an adequate introduction. There is little of much value on the Internet or in journals or conference proceedings.

**Research and Practical Issues of Enterprise Information Systems II Volume 2** Li Xu, A.

Min Tjoa, Sohail S. Chaudhry, 2007-12-29 Enterprise information systems (EIS) have become increasingly popular over the last 15 years. 1. 2. EIS integrate and support business processes across functional boundaries in a supply chain environment. 3. 5. In recent years, more and more enterprises world-wide have adopted EIS such as Enterprise Resource Planning (ERP) for running their businesses. Previously, information systems such as CAD, CAM, MRP and CRM were widely used for partial functional integration within a business organization. With global operation, global supply chain and fierce competition in place, there is a need for suitable EIS such as ERP, E-Business or E-Commerce systems to integrate extended enterprises in a supply chain environment with the objective of achieving efficiency, competency and competitiveness. As an example, the global economy has forced business enterprises such as Dell and Microsoft to adopt ERP in order to take the advantage of strategic alliances within a global supply chain environment. Today, not only the large companies but also the medium companies are quickly learning that a highly integrated EIS is more and more a required element of doing business. Businesses all over the world are investing billions of dollars in acquiring and implementing EIS, in particular ERP systems by SAP and Oracle. As a result, there is a growing demand for researching EIS to provide insights into challenges, issues and solutions related to the design.

implementation and management of EIS      *Database Design for Smarties* Robert J.
