Advances In Network Analysis And Its Applications Mathematics In Industry:

Advances in Network Analysis and its Applications Evangelos Kranakis, 2012-10-23 As well as highlighting potentially useful applications for network analysis this volume identifies new targets for mathematical research that promise to provide insights into network systems theory as well as facilitating the cross fertilization of ideas between sectors Focusing on financial security and social aspects of networking the volume adds to the growing body of evidence showing that network analysis has applications to transportation communication health finance and social policy more broadly It provides powerful models for understanding the behavior of complex systems that in turn will impact numerous cutting edge sectors in science and engineering such as wireless communication network security distributed computing and social networking financial analysis and cyber warfare The volume offers an insider s view of cutting edge research in network systems including methodologies with immense potential for interdisciplinary application The contributors have all presented material at a series of workshops organized on behalf of Canada s MITACS initiative which funds projects and study grants in mathematics for information technology and complex systems These proceedings include papers from workshops on financial networks network security and cryptography and social networks MITACS has shown that the partly ghettoized nature of network systems research has led to duplicated work in discrete fields and thus this initiative has the potential to save time and accelerate the pace of research in a number of areas of network systems research Algorithms and Models for the Web Graph

Credit Default Swap Gracia S. Ugut,2024-04-15 Credit default swaps and credit derivatives in general are one of the many specialized derivatives that are used for the purpose of hedging speculation and arbitrage The primary purpose of a credit derivative or the need behind the creation of such a product is to serve as a credit risk transfer mechanism Credit risk is one of the four broadly classified types of risks others being operational risk market risk and liquidity risk is the possibility of a loss resulting from a borrower s failure to

repay a loan or meet contractual obligations Credit Default Swaps and Credit Derivatives gained popularity in the pre and during Global Financial Crisis in 2008 It has earned a bad reputation since then as it is perceived as one of the most dangerous financial derivatives The decline in trading volume of emerging market sovereign CDS in the years since the 2008 global financial crisis along with the steady rise in volume of emerging market bond ETFs might have contributed to this increase in the relative efficiency of bond price discovery Credit Default Swaps CDS were generally a better source of price discovery than spreads computed from bond prices Credit Default Swaps CDS tended to be a better measure of value compared to spreads computed from bonds which may have been traded infrequently However since the COVID 19 crisis the cash bond market appears to have made strong inroads as the better source for investors to compare relative value and risk

Mishev, 2008 Studies on queueing models and their publication in professional journals and textbooks have been sparse over the past eleven decades Collections of some of these studies have appeared either as single volumes or just chapters of single volumes and or monographs This book is an attempt to present some queueing models especially those applicable in business and industry in a style between a monograph and a textbook Also the need of researchers and practitioners for a handbook type text and the current lack of it explain the need for a book of this kind Most of the basic terminologies and concepts that appear throughout the text are introduced in a systematic way in the first two chapters nevertheless previous exposition to a first course in probability and statistics is advised for later chapters Artificial Intelligence.
